*Treatments For Borderline Personality Disorder (BPD). An Overview over Existing Research* Danielle LaBeau, 2016-06-09 Literature Review from the year 2016 in the subject Psychology Clinical Psychology Psychopathology Prevention grade A language English abstract Borderline Personality Disorder BPD is a complicated psychological disorder that is more common than many believe and involves irregular emotion and behavior and a severe lack in mental awareness reasoning Due to the vast and acute diagnostic criteria of BPD patients are viewed as difficult to treat To date there is no medication that has been found to effectively treat BPD For this reason many clinicians turn away patients with BPD because they are not competent to treat BPD and the often poor prognosis Not only are clinicians hesitant to take on a patient with BPD the patient is often unwilling to seek and maintain treatment It is thought that those with BPD experienced emotional vulnerability at very young ages which lead to powerful emotional anguish and pain in their adult years This pain and distress is often followed by passionate and uncontrollable anger manipulation and a desire for attention BDP can be classified mainly as psychosocial instability meaning that it takes its form in the inability to maintain relationships Although there is a desire to be loved and accepted those with BPD reject others because of their fear of being rejected In the same way many people who are in relationships friends family or significant others cannot handle a person suffering from such a complicated personality disorder Not only are personal relationships hard to maintain jobs are also hard for a person with BPD to maintain this often leads to poverty for those with BPD All of these factors combined can lead to the abuse of drugs and or alcohol and eating disorders Also because of the deep emotional pain that is present most of the times BPD patients struggle with self harm eventually leading to suicide It is safe to say that BPD symptoms affect all aspects of life

Borderline Personality Disorder: 30+ Secrets How To Take Back Your Life When Dealing With BPD (A Self Help Guide)

Scott Green,2015-06-10 Typically borderline personality disorder is defined as a mental health disorder that causes people to have turbulent feelings which result in turbulent actions More often than not these feelings and actions occur over an extended period of time Therefore a diagnosis of borderline personality disorder cannot be made unless an individual has displayed these characteristics for several months to a period of several years In addition most mental health experts avoid making a diagnosis throughout childhood and adolescence because the mind of a child or an adolescent works differently than the mind of an adult It is the general consensus that it is important to wait until a person has reached adulthood thereby allowing the brain to fully develop before a diagnosis can be made with any certainty whatsoever This is done so that mental health professionals can work on the side of caution However it sometimes has rather detrimental effects for the person that is suffering from the disorder because anyone that has been displaying these characteristics earlier in their life is often forced to either go without treatment or be treated for something that they are not suffering from until they finally get a definitive diagnosis This makes it that much more difficult for anyone that is finally diagnosed to get the proper treatment and for the treatment to be effective
