The Segmentation of the Nervous System in Squalus Acanthis Herbert Vincent Neal, 1898 The American Naturalist, 1881 *"The" Journal of Comparative Neurology*, 1894 **The Early Embryology of Ciona Intestinalis, Flemming (L.)**. William Ernest Castle, 1896 **The Early Embryology of Ciona Intestinalis, Flemming (L.)** Castle, 1896

Bulletin of the Museum of Comparative Zoology Museum of Comparative Zoology, 1896 *Bulletin of the Museum of Comparative Zoology*, 1898 **Stations in the Field** Raf De Bont, 2015-03-20 Modern zoological research aims to study the animal in its own dwelling place Otto Zacharias a German plankton specialist and former science journalist made this claim in 1905 More than hundred years later it might sound surprising When we think of sites of animal research that symbolize modernity the first places that come to mind are notto use Zacharias s example the parts of inland lakes favored by freshwater plankton The period around 1900 after all witnessed the rise of grand urban research institutes that housed industrial type laboratories filled with mercury pumps new fangled microscopes galvanometers electric centrifuges gas motors and spectrometers Yet Zacharias belonged to a group of zoologists who were establishing a novel way of studying nature in the field They developed what ecologists today describe as place based research It focuses on complex systems of interacting organisms usually through studies over long periods of time in a natural field context This was a modern approach and as such it needed modern infrastructure the field station Beginning in the 1870s a growing number of biological field stations were founded first in Europe and later elsewhere around the world Thousands of zoologists received their training and performed their research at these sites By revealing the intricate activities that enabled them to perform science in the animal s dwelling place Raf de Bont is the first to give this history of how life scientists were brought closer to living nature *Arthropod Brains* Nicholas James Strausfeld, 2012-01-02 In *The Descent of Man* Charles Darwin proposed that an ant s brain no larger than a pin s head must be sophisticated to accomplish all that it does Yet today many people still find it surprising that insects and other arthropods show behaviors that are much more complex than innate reflexes They are products of versatile brains which in a sense think Fascinating in their own right arthropods provide fundamental insights into how brains process and organize sensory information to produce learning strategizing cooperation and sociality Nicholas Strausfeld elucidates the evolution of this knowledge beginning with nineteenth century debates about how similar arthropod brains were to vertebrate brains This exchange he shows had a profound and far reaching impact on attitudes toward evolution and animal origins Many renowned scientists including Sigmund Freud cut their professional teeth studying arthropod nervous systems The greatest neuroanatomist of them all Santiago Ram n y Cajal founder of the neuron doctrine was awed by similarities between insect and mammalian brains Writing in a style that will appeal to a broad readership Strausfeld weaves anatomical observations with evidence from molecular biology neuroethology cladistics and the fossil record to explore the neurobiology of the largest phylum on earth and one that is crucial to the well being of our planet

Highly informative and richly illustrated *Arthropod Brains* offers an original synthesis drawing on many fields and a comprehensive reference that will serve biologists for years to come

The Literary Structure of Scientific Argument
Peter Dear, 2015-08-12 In this volume seven historians of science examine the historical creation and meaning of a range of scientific textual forms from the seventeenth to the late nineteenth centuries They consider examples from the fields of chemistry medicine physics zoology physiology and mathematics exposing the rich possibilities for a new historically rooted approach to our scientific cultural heritage Peter Dear presents the case for taking texts seriously asking historians of science to confront issues and techniques moving to the forefront in a number of disciplines and asking literary scholars and literary minded intellectual historians not to put science quietly to one side or treat it as a mere source of cultural metaphors but to understand it in terms of historically specific textual construction *The Literary Structure of Scientific Argument* will interest historians philosophers and sociologists as well as literary scholars concerned with science

Modern Art and the Idea of the Mediterranean Vojtech Jirat-Wasiutyński, Anne Elizabeth Dymond, Vojtech Jirat-Wasiutyński, 2007-01-01

The Mediterranean is an invented cultural space on the frontier between North and South West and East Modern Art and the Idea of the Mediterranean examines the representation of this region in the visual arts since the late eighteenth century placing the idea of the Mediterranean a cultural construct rather than a physical reality at the centre of our understanding of modern visual culture This collection of essays features an international group of scholars who examine competing visions of the Mediterranean in terms of modernity and cultural identity questioning and illuminating both European and non European representations An introductory essay frames the analysis in terms of a new spatial paradigm of the Mediterranean as a geographic historical and cultural region that emerged in the late eighteenth century as France and Britain colonized the surrounding territories Essays are grouped around three vital themes visualization of the space of the new Mediterranean varied uses of the classical paradigm and issues of identity and resistance in an age of modernity and colonialism Drawing on recent geographical historical cultural and anthropological studies contributors address the visual representation of identity in both the European and the Oriental the colonial and post colonial Mediterranean

Lets delve into the realm of bestselling books, exploring the engaging narratives that have captivated audiences this year. Ursprung Wirbelthiere Das Princip Functionswechsels : Colleen Hoovers "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and thrilling novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
