Short-term Therapy for Long-term Change Marion Fried Solomon, 2001 Is it possible to effect deep lasting meaningful psychological change in a short period of time

Handbook of Evidence-Based

Psychodynamic Psychotherapy Raymond A. Levy, J. Stuart Ablon, 2008-09-20 The importance of conducting empirical research for the future of psychodynamics is presented in this excellent new volume In *Handbook of Evidence Based Psychodynamic Psychotherapy Bridging the Gap Between Science and Practice* the editors provide evidence that supports this type of research for two primary reasons The first reason concerns the current marginalization of psychodynamic work within the mental health field Sound empirical research has the potential to affirm the important role that psychodynamic theory and treatment have in modern psychiatry and psychology The second reason that research is crucial to the future of psychodynamic work concerns the role that systematic empirical investigations can have in developing and refining effective approaches to a variety of clinical problems Empirical research functions as a check on subjectivity and theoretical alliances in on going attempts to determine the approaches most helpful in working with patients clinically *Handbook of Evidence Based Psychodynamic Psychotherapy Bridging the Gap Between Science and Practice* brings together a panel of distinguished clinician researchers who have been publishing their findings for decades This important new book provides compelling evidence that psychodynamic psychotherapy is an effective treatment for many common psychological problems

Psykoterapi för substansbrukssyndrom - betydelsen av affekter My Frankl, 2019-01-08 Substance use disorder SUD is a serious disorder with severe consequences for the individual the family and for society Comorbidity is common in the SUD population and the diversity of the disorder calls for a multiplicity of treatment options The overall aim of this thesis was to explore the role of affects in psychotherapy for SUD Further aims were to investigate affect focused therapeutic orientations demonstrate the importance of common factors and evaluate a measure of affect phobia In Study I a naturalistic design was employed to examine how the discrepancy between patients expectations and experience of psychotherapy related to alliance in 41 patients 24 in individual therapy and 17 in group An additional analysis concerned whether different dimensions of role expectations predicted retention in psychotherapy Study II was the first psychometric evaluation of the Affect phobia test a test developed to screen the ability to experience express and regulate emotions Data were collected from two samples A clinical sample of 82 patients with depression and or anxiety participating in a randomized controlled trial of Internet based affect focused treatment and a university student sample of 197 students Data analysed included internal consistency test retest reliability factor analysis and calculation of an empirical cut off Study III focused on the feasibility of individual 10 week Affect Phobia Therapy APT for patients diagnosed with mild to moderate alcohol use disorder AUD and problematic affective avoidance in a nonconcurrent multiple baseline design Study IV comprised an evaluation of the feasibility and preliminary effectiveness of APT adapted to a structured group format for patients n 22 with comorbid substance use disorder and ADHD with core features of affective avoidance emotion dysregulation in an open design In Study I an overall discrepancy between role expectations and experiences was significantly related to a lower level of therapeutic alliance in group therapy This relationship was not found in individual therapy Expectations prior to psychotherapy

characterized by defensiveness correlated negatively with therapy retention even when controlling for waiting time for therapy. In Study II the internal consistency for the total score on the Affect phobia test was satisfactory but it was not for the affective domains Anger, Assertion, Sadness, Grief, and Attachment Closeness. Test retest reliability was satisfactory. The exploratory factor analysis resulted in a six factor solution and only moderately matched the test's original affective domains. An empirical cut off between the clinical and the university student sample were calculated and yielded a cut off of 72 points. In Study III patients reported no adverse events due to the treatment and finished the whole study period. The patients had different trajectories of alcohol consumption and craving and the hypothesis that heavy episodic drinking would subside during the time in therapy did not hold true. In Study IV patients reported significant pre to post changes in increased self compassion and decreased affect phobia but no change in psychological distress or emotion dysregulation. Craving fluctuated throughout the study period and patients drinking pattern changed in the direction of more social drinking. Main conclusions are the following: The Affect Phobia Test is a useful screening instrument for detecting emotional difficulties related to psychological malfunction. APT in both group and individual format are feasible treatments for the SUD population and has the potential to broaden the treatment options for some patients with SUD. Investigating expectations and fears prior to therapy may be means to prevent attrition.

Substansberoende r en allvarlig störning och samsjuklighet ofta förekommande. Den stora variationen av svårigheter kräver olika behandlingsalternativ. Syftet med avhandlingen var att undersöka affekters roll i psykoterapi för populationen. Ytterligare syftet var att undersöka betydelsen av gemensamma faktorer i psykoterapi samt normera ett självskattningsformulär för affektfobi. I studie I undersöktes skillnaden mellan patienters förväntningar, erfarenheter av terapi och allians. I studie II utvärderades de psykometriska egenskaperna hos affektfobitestet. I studie III och IV undersöktes genomförbarheten av affektfobiterapi individuellt och i grupp. Resultaten av studierna visade att stor skillnad mellan roll förväntningar inför och erfarenheter av terapi var signifikant korrelerade med allians i gruppterapi. Affektfobitestets psykometriska egenskaper var tillfredsställande avseende skalan som helhet. Affektfobiterapi visade sig vara adaptiv affektiv förbättring och självmedkänsla, men behandlingen gav inget starkt förhållande mellan substansbruket. Slutsatserna är att fokus på affekter i terapi för substansberoende har betydelse och att affektfobiterapi är en genomförbar behandling för populationen. Genom att undersöka förväntningar och resurser inför terapi kan avhopp förhindras.

Integrated Treatment for Personality Disorder W. John Livesley, Giancarlo Dimaggio, John F. Clarkin, 2015-09-24. Rather than arguing for one best approach for treating personality disorder, this pragmatic book emphasizes the benefits of weaving together multiple well-established intervention strategies to meet each patient's needs. A framework is provided for constructing a comprehensive case formulation, planning treatment, and developing a strong therapeutic alliance. The clinician is guided to utilize techniques from all major therapeutic orientations to address transdiagnostic personality symptoms and problems involving emotion regulation, interpersonal functioning, and self and identity. Showing how to pick and choose from what works in a thoughtful

coordinated fashion the book features rich clinical illustrations including a chapter length case example See also Handbook of Personality Disorders Second Edition edited by W John Livesley and Roseann Larstone the leading reference that surveys theory research and evidence based treatments Psychodynamic Psychotherapy for Personality Disorders John F.
