Neurophysiological Signals that Reflect Cognitive or Affective State Anne-Marie Brouwer,Thorsten O. Zander,Jan B. F. van Erp,2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual s cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual s cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic Emotion
Measurement Herbert L. Meiselman,2016-04-12 Emotion Measurement reviews academic and applied studies in order to

highlight key elements of emotions which should be considered in the development and validation of newer commercial methods of emotion measurement The goal of the book is practical but the approach will be both academic and applied It is aimed primarily at sensory scientists and the product developers they work alongside who require knowledge of measuring emotion to ensure high levels of consumer acceptability of their products The book begins with a review of basic studies of emotion including the theory physiology and psychology of emotions these are the standard studies of which food and sensory scientists as well as product developers need to be aware The next section highlights methods for studying emotions on a relatively basic level The book then moves to practical applications with chapters on emotion research in food and beverage as well as in a range of product and clinical settings Finally there is a treatment of cross cultural research on emotions This is critical because much of the newer commercial research is aimed at markets around the world requiring methods which work in many cultures The book ends with an integrative summary of the material presented Serves as the first book on the market on emotion measurement aimed at sensory scientists and production development practitioners working in commercial R and D Also useful for psychologists with an interest in emotion Brings together applied and academic strands of emotion measurement research for the first time Focuses on cross cultural studies of emotions which is currently lacking from most of the literature in the field
