The Work Of Nature How The Diversity Of Life Sustains Us:

The Work of Nature Yvonne Baskin, 1998-08-01 The lavish array of organisms known as biodiversity is an intricately linked web that makes the earth a uniquely habitable planet Yet pressures from human activities are destroying biodiversity at an unprecedented rate How many species can be lost before the ecological systems that nurture life begin to break down In *The Work of Nature* noted science writer Yvonne Baskin examines the threats posed to humans by the loss of biodiversity She summarizes and explains key findings from the ecological sciences highlighting examples from around the world where shifts in species have affected the provision of clean air pure water fertile soils lush landscapes and stable natural communities As Baskin makes clear biodiversity is much more than number of species it includes the complexity richness and abundance of nature at all levels from the genes carried by local populations to the layout of communities and ecosystems across the landscape Ecologists are increasingly aware that mankind's wanton destruction of living organisms the planet's work force threatens to erode our basic life support services With uncommon grace and eloquence Baskin demonstrates how and why that is so Distilling and bringing to life the work of the world's leading ecologists *The Work of Nature* is the first book of its kind to clearly explain the practical consequences of declining biodiversity on ecosystem health and function

The Work of Nature Yvonne Baskin, International Council of Scientific Unions. Scientific Committee on Problems of the Environment, 1997-02 The lavish array of organisms known as biodiversity is an intricately linked web that makes the Earth a uniquely habitable plane In this book a noted science writer examines the threats posed to humans by the loss of biodiversity and explains key findings from the ecological sciences It is the first book of its kind to clearly explain the practical consequences of declining biodiversity of ecosystem health and function and consequently on human society

Enterprising Nature Jessica Dempsey, 2016-07-29 Winner of the 2018 James M Blaut Award in recognition of innovative scholarship in cultural and political ecology *Enterprising Nature* explores the rise of economic rationality in global biodiversity law policy and science To view Jessica's animation based on the book's themes please visit http://www.bioeconomies.org/enterprising_nature Examines disciplinary apparatuses ecological economic methodologies computer models business alliances and regulatory conditions creating the conditions in which nature can be produced as enterprising Relates lively firsthand accounts of global processes at work drawn from multi site research in Nairobi Kenya London England and Nagoya Japan Assesses the scientific technical geopolitical economic and ethical challenges found in attempts to enterprise nature Investigates the implications of this will to enterprise for environmental politics and policy **Sparing Nature** Jeffrey K. McKee, 2003 Are humans too good at adapting to the earth's natural environment Every day there is a net gain of more than 200 000 people on the planet that's 146 a minute Has our explosive population growth led to the mass extinction of countless species in the earth's plant and animal communities Jeffrey K McKee contends yes The more people there are the more we push aside wild plants and animals In *Sparing Nature* he explores the cause and effect relationship

between these two trends demonstrating that nature is too sparing to accommodate both a richly diverse living world and a rapidly expanding number of people The author probes the past to find that humans and their ancestors have had negative impacts on species biodiversity for nearly two million years and that extinction rates have accelerated since the origins of agriculture Today entire ecosystems are in peril due to the relentless growth of the human population McKee gives a guided tour of the interconnections within the living world to reveal the meaning and value of biodiversity making the maze of technical research and scientific debates accessible to the general reader Because it is clear that conservation cannot be left to the whims of changing human priorities McKee takes the unabashedly neo Malthusian position that the most effective measure to save earth s biodiversity is to slow the growth of human populations By conscientiously becoming more responsible about our reproductive habits and our impact on other living beings we can ensure that nature s services will make our lives not only supportable but also sustainable for this century and beyond

Marine Biodiversity and Ecosystem Functioning Martin Solan, Rebecca J. Aspden, David M. Paterson, 2012-07-19 This edited volume is the first to address the latest advances in biodiversity function science using marine examples It provides an in depth evaluation of the science before offering a perspective on future research directions for some of the most pressing environmental issues facing society today and in the future
