Sensitive water : Dynamization & Information Milène Souvignet,2025-09-16 In traditional societies it is often believed that the Universe is one If we hold to this supposition each discipline suggests vision of the world based on its own concept and frame of reference Therefore overall everything is linked and closely interconnected It is in this frame of mind that water is approached from the little known and little documented angle of its sensitivity or dynamization The goal here is to summarise all the research carried out on this topic without making a catalogue out of it but rather trying to retrace the Ariadne s thread in order to link the different results and place each of them within a wider field of coherence and understanding Each of these advances is supported by the results and thoughts of numerous researchers each contributing a piece of the jigsaw according to his or her own speciality or approach physical chemistry biology quantum mechanics general relativity dynamics movement and so forth Nearly forty researchers from all over the world are involved from the 1900s to the present day including Jeanne Rousseau Goethe Theodor Schwenck Marc Henry Nassim Hamein Gerald Pollack and many others By analysing the work of each of them the author gradually offers here an increasingly accurate but also vast and coherent picture of the reality of water The starting point is based on what is known and commonly accepted by the scientific community Little by little the study progresses in a field that is increasingly confidential and or underdeveloped at present apart from in a few private or cutting edge research environments Three approaches are being explored the experimental way the observational way artistic way the theoretical mathematical way with the three major sciences of today Newton s classical mechanics macroscopic scale quantum mechanics infinitely small scale and Einstein s general relativity infinitely large scale

Energizing Water Jochen Schwuchow,John Wilkes,Iain Trousdell,2013-04-16 The poor quality of water as well as its restricted supply and availability is one of the biggest challenges of our time with presently two fifth s of the world s population unable to find adequate fresh

water for essential usage Over 40 years research has been carried out on the positive effects that rhythms and specific water flow has on water's capacity to support life Energizing Water presents this cutting edge research to the general and professional reader at a time when interest in finding solutions to water's huge worldwide problems is growing rapidly Three aspects determine water quality its chemical constituents including its oxygen levels its organic aspects with the danger of contamination by effluent pathogens and algae and its energetic nature The latter facet has been recognized from time immemorial by traditional societies who have developed their own sciences in relation to water quality using terms such as prana and chi for energy Now through the introduction of quantum physics into the life sciences modern science is beginning to accept this concept measuring energy as light emission Research into energetic water quality and particularly into the creation of moulded surfaces that support biological purification of the chemical and organic elements as well as enlivening the energetic attributes goes back to George Adams and John Wilkes pioneering work in the 1960s The invention of Flowform technology in 1970 carried this research further providing the world with one of the first modern day biomimicry eco technologies This creative technology applies nature's best methods to produce extraordinary results and this book outlines the background story on research and application of the Flowform method today JOHN WILKES originated the Flowform Method in 1970 following periods of work with George Adams and Theodor Schwenk After further research project work led to installations in many countries In 2002 an Institute was built at Emerson College providing more adequate space for research into the qualitative effects of rhythmic movement on water JOCHEN SCHWUCHOW is a freelance research and teaching consultant at Emerson College in England IAIN TROUSDELL is director of the Healing Water Institute in NZ

The Crisis of Innovation in Water and Wastewater
Duncan A. Thomas, Roger R. Ford, 2005-01-01

This is an extremely well researched and documented book The authors hypothesis is that the current water and wastewater sector is failing the populations of the western world by clinging to orthodox and short term visions of new technology and innovation and also failing the developing nations by believing that delivery of western world high technology solutions is a contribution to humanitarian development This is the crisis of innovation To many practitioners in the water industry the book will be perceived to be hypercritical of the incrementalism conservative and dogged traditionalism of the sector but in fact it is stimulating and positive In the latter chapters an alternate more holistic model of water development is described There needs to be a movement from large central infrastructure resources to distributed systems that are more appropriate to local needs and can be coupled with environmentally sustainable energy sources and practices Tim Lack European Topic Centre on Water UK Whilst acknowledging a massive leap from standpipe to universal water provision in 100 years in developed countries the authors of this book see problems for global sustainable water supply and wastewater removal in the future Using the UK water industry as an example they describe the global water industry as risk averse and unwilling to innovate a view that is encouraged by the institutional and financial regimes under which it works The book explores the reasons for concern and sets out some hard hitting views on how the water industry is failing to identify and tackle the essential problems in a world which is becoming ever more depleted of fresh water The concluding chapter brings to a focus the problems of the crisis in innovation and gives some concrete suggestions for tackling them This volume should raise the awareness of policymakers and regulators technologists and concerned members of the public Peter Chave Independent Consultant and formerly Head of Pollution Control National Rivers Authority UK This significant new book highlights a little acknowledged but potentially catastrophic crisis of innovation in the global water sector which institutions and industries are frighteningly ill equipped to tackle or even accept It suggests potential new technology and policy approaches to overcome both current and future problems The book explores how technological innovation is vital to help provide sustainable water in both the UK and developing countries However innovation is being overlooked in the face of global trends to privatize and regulate water utilities The authors highlight how the global water sector is failing to respond to increasingly complex world needs and continues to build largely unsustainable centralized infrastructures opposing more appropriate distributed and local modern technologies The book also includes suggestions for potentially innovative technology and policy solutions to meet escalating global water and wastewater demands Importantly the authors adopt a long term perspective that crosses both disciplinary and institutional boundaries and include an international comparative perspective covering a diverse range of examples and countries This comprehensive book will have a broad appeal amongst researchers and academics with an interest in

technology management innovation studies geography and development studies It will also be a valuable asset for water regulators and governmental and non governmental organisations working in this field *Renegade Beauty* Nadine Artemis,2017-11-14 Rethink conventional notions of beauty and wellness abandon established regimes and commercial products and embrace your renegade beauty In this essential full color guide Nadine Artemis introduces readers to the concept of renegade beauty a practice of doing less and allowing the elements and the life force of nature to revive the body skin and soul so our natural radiance can shine through Anyone stuck in perpetual loops of new products facials and dermatologist appointments will find answers as Artemis illuminates the energizing elements of sun fresh air water the earth and plants This book is a comprehensive resource for anyone who wants to simplify their self care routine take their health into their own hands and discover their own radiant beauty

The Living Climate Luigi Morelli,2024-10-28 What are the causes of our current environmental and ecological crises Is the enforcement of international net zero carbon strategy the best solution to the problems we face or are there deeper issues that need to be addressed Rejecting the view of the earth as an isolated or closed system as in conventional computer modelling Luigi Morelli argues that our planet is an open system a living entity that maintains a dynamic equilibrium within its own kingdoms and the wider solar system Humans however still have a pivotal role to play Building on the pioneering work of Goethe Rudolf Steiner Viktor Schauberger and others Morelli expands our view of the climate from the oceans and atmosphere to the sun and from the last 150 years to the history of our climate over millennia In doing so he exposes the weakness of the prevailing fixed narratives around our undoubtedly changing environment in particular the conventional hypothesis concerning carbon emissions Such consensus science is often at the mercy of established economic interests who have largely co opted academia and scientific institutions In a thoroughly researched and

accessible study *The Living Climate* explores the intricacy and wisdom of an untold variety of cycles in nature and the critical and overlooked role of water within the greenhouse gas model Challenging mechanistic representations of the global ecosystem Morelli's holistic scientific review offers potential solutions to seemingly intractable problems **The Mystery of Ball Lightning Revealed** Vladimir Torchigin, 2024-10-28 In this book the consequences of a perfectly new natural phenomenon associated with the existence of self confined circulating light which is responsible for the paradoxical behavior and anomalies of ball lightning are considered It is shown that similar phenomena can exist in the microworld which makes it possible to explain the finite lifetime of microworld objects their wave properties mutual attraction and the possibility of energy exchange between nuclei without overcoming the Coulomb barrier The latter possibility allows the extraction of nuclear energy using circulating light Several options for nuclear power plants are given where nuclear fuel is ordinary water The book is based on over 80 scientific articles published in leading international scientific journals in physics and optics Creative Practice Inquiry in Architecture Ashley Mason, Adam Sharr, 2022-10-03 This collection introduces illustrates and advances fresh ideas about creative practice inquiry in architecture It concerns architectural knowledge how architects can use their distinctive skills habits and values to advance professional insight and how such insights can be extended to make wider contributions to society culture and scholarship It shows how architectural ways of knowing and working can be mobilised as tools for research Collected here are a series of creative practices that emerge out of architecture and actively engage with other fields and methods reaching across the academic landscape Architectural inquiries collected in this book probe matters that lie beyond the obvious expectations the conventions the default of the discipline Drawing borrowing adapting dramatising perhaps monstering experimenting cartooning the tools and methods of each inquiry vary but they all share a common outward gaze engaging architectural ways of knowing with other disciplines and practices including the arts biological sciences ethnography and technology Chapters gathered here offer insight not only into incipient modes and tools of architectural research but emerging ethical practical and philosophical positions intimately tied to the creative practices involved Setting out the idea of creative practice inquiry in architecture this innovative volume offers a lively and resourceful contribution to a growing body of work on design as research It will be of interest to students keen to pursue architectural ways of thinking and writing practitioners who want to use their distinctive professional abilities to contribute to architectural and scholarly knowledge and academics and doctoral candidates keen to engage with the burgeoning scholarly field of design research **Liquid Architecture** Pierangelo Marco Scravaglieri, 2023-12-22 *Liquid Architecture* challenges the idea of architecture as a fixed inert container and reconceptualises it as a body whose boundaries are rather blurred and ever changing This book moves away from form as the primary driver of spatial protocols and explores what the built environment might look like when viewed through the lenses of a wet ontology that is attentive to fluidity flows and territorial dynamism A reconfiguration of architectural materials and

authorship is thus considered leading in turn to an exploration of the ethical dimensions of co designing with natural systems of various viscosities through liquid paradigms The book examines a set of principles for practice led discoveries that incorporate hybrid mixed media with the author s intersubjective relationship with liquid matter Drawing from qualitative based analytical investigation models the text allows comprehension of the liquid phenomena via material contextualisation of an ever becoming research setting Through a practical and theoretical engagement with the ontology of liquids the reader is exposed to a range of design led experiments and creative propositions visualisation systems construction and testing of physical models that collectively translate into a series of novel insights for architectural agendas This book will be of interest to architecture and design research students and academics because it advocates the need for a more symbiotic and resilient approach to natural systems which could benefit from the integration of regenerating material flows into our buildings and urban settlements

L'eau sensible : Dynamisation et information de l'eau Milène Souvignet, 2021-05-20 Il est dit dans les socié tés traditionnelles que l Univers ne fait qu UN Si l on s en tient cette proposition chaque discipline propose une vision du monde selon un concept et un cadre de référence qui lui est propre Au final tout est lié et troitement interconnecté C est dans cet état d esprit que l eau est abordé sous l aspect m

connu et peu document qu'est sa sensibilité ou encore sa dynamisation. L'objet principal de la réflexion est d'effectuer une synthèse de l'ensemble des recherches faites ce sujet sans en faire un catalogue mais plutôt en essayant de retracer le fil d'Ariane qui relie les différents résultats afin de les replacer chacun dans un champ de cohérence et de compréhension plus grand. Chacune des avancées de la réflexion est tirée par les résultats et pensées de nombreux chercheurs chacun apportant une pièce de puzzle selon sa propre spécialité ou approche : physique chimie biologie mécanique quantique relativité générale dynamique mouvement. Est impliquée par là une cinquantaine de chercheurs de tous les pays des années 1900 nos jours tels que Jeanne Rousseau Goethe Theodor Schwenck Marc Henry Nassim Hameiri Gerald Pollack. C'est en analysant les travaux de chacun d'entre eux que l'on parvient petit à petit à construire l'image d'un tableau de plus en plus précis vaste et cohérent. Le point de départ s'appuie sur les connaissances connues et communément admises par la communauté scientifique. Peu à peu l'étude progresse sur un terrain de plus en plus confidentiel et où peu d'élites l'heure actuelle hormis dans quelques milieux de recherche privée ou de pointe. Trois voies d'approche sont explorées : la voie expérimentale la voie de l'observation les anthroposophes et les artistes la voie théorique des mathématiques avec les trois grandes sciences actuelles la mécanique classique de Newton celle macroscopique la mécanique quantique celle de l'infiniment petit et la relativité générale d'Einstein celle de l'infiniment grand. Ingénieur traitement des eaux et ingénieur agronome de métier je me attache croiser ces deux passions et rechercher quelles sont les applications possibles et concrètes de la dynamisation de l'eau notamment dans le domaine agricole. Ainsi ce livre est également un recueil d'applications dans le domaine agricole issues des retours d'expérience de l'auteur des recherches dans ces domaines et des pratiques du monde agricole.
