Theory Of Function Spaces Iii Monographs In Mathematics V 3:

Theory of Function Spaces III Hans Triebel, 2006-09-10 This book may be considered as the continuation of the monographs Tri and Tri with the same title It deals with the theory of function spaces of type s, s, B and F as it stands at the beginning of this century These two scales of p, q spaces cover many well known spaces of functions and distributions such as Hölder Zygmund spaces fractional and classical Sobolev spaces Besov spaces and Hardy spaces On the one hand this book is essentially self contained On the other hand we concentrate principally on those developments in recent times which are related to the nowadays numerous applications of function spaces to some neighboring areas such as numerics signal processing and fractal analysis to mention only a few of them Chapter 1 in Tri is a self contained historically oriented survey of the function spaces considered and their roots up to the beginning of the 1990s entitled How to measure smoothness Chapter 1 of the present book has the same heading indicating continuity As far as the history is concerned we will now be very brief restricting ourselves to the essentials needed to make this book self contained and readable We complement Tri Chapter 1 by a few points omitted there But otherwise we jump to the 1990s describing more recent developments Some of them will be treated later on in detail

Theory of Function Spaces Hans Triebel, 1983 **Functional Analysis, Harmonic Analysis, and Image Processing** Michael Cwikel, Mario Milman, 2017-07-26 This volume is dedicated to the memory of Björn Jawerth It contains original research contributions and surveys in several of the areas of mathematics to which Björn made important contributions Those areas include harmonic analysis image processing and functional analysis which are of course interrelated in many significant and productive ways Among the contributors are some of the world's leading experts in these areas With its combination of research papers and surveys this book may become an important reference and research tool This book should be of interest to advanced graduate students and professional researchers in the areas of functional analysis harmonic analysis image processing and approximation theory It combines articles presenting new research with insightful surveys written by foremost experts

The Dirichlet Space and Related Function Spaces Nicola Arcozzi, Richard Rochberg, Eric T. Sawyer, Brett D. Wick, 2019-09-03 The study of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and functional analysis It was introduced about 100 years ago and continues to be an area of active current research The theory is related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to study a range of topics

including the Pick property multipliers Carleson measures boundary values zero sets interpolating sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies sometimes weak and sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences estimates are obtained to prove corona theorems
