User Manual For 2015 Monte Carlo:

Domain Generalization with Machine Learning in the NOvA Experiment Andrew T.C. Sutton,2023-11-08 This thesis presents significant advances in the use of neural networks to study the properties of neutrinos Machine learning tools like neural networks NN can be used to identify the particle types or determine their energies in detectors such as those used in the NOvA neutrino experiment which studies changes in a beam of neutrinos as it propagates approximately 800 km through the earth NOvA relies heavily on simulations of the physics processes and the detector response these simulations work well but do not match the real experiment perfectly Thus neural networks trained on simulated datasets must include systematic uncertainties that account for possible imperfections in the simulation This thesis presents the first application in HEP of adversarial domain generalization to a regression neural network Applying domain generalization to problems with large systematic variations will reduce the impact of uncertainties while avoiding the risk of falsely constraining the phase space Reducing the impact of systematic uncertainties makes NOvA analysis more robust and improves the significance of experimental results

Materials for Nuclear Waste Immobilization Michael I. Ojovan,Neil C. Hyatt,2020-01-09 The book outlines recent advances in nuclear wastefrom materials including glasses ceramics and cements and spent nuclear fuel It focuses on durability aspects and contains data on performance of nuclear wasteforms as well as expected behavior in a disposal environment

Measuring Compliance Melissa Rorie,Benjamin van Rooij,2022-02-24 Compliance or the behavioral response to legal rules has become an important topic for academics and practitioners A large body of work exists that describes different influences on business compliance but a fundamental challenge remains how to measure compliance or noncompliance behavior itself Without proper measurement it s impossible to evaluate existing management and regulatory enforcement practices Measuring Compliance provides the first comprehensive overview of different approaches that are or could be used to measure compliance by business organizations The book addresses the strengths and weaknesses of various methods and offers both academics and practitioners guidance on which measures are best for different purposes In addition to understanding the importance of measuring compliance and its potential negative effects in a variety of contexts readers will learn how to collect data to answer different questions in the compliance domain and how to offer suggestions for improving compliance measurement

Trade-off Analytics Gregory S. Parnell,2016-10-25 Presents information to create a trade off analysis framework for use in government and commercial acquisition environments This book presents a decision management process based on decision theory and cost analysis best practices aligned with the ISO IEC 15288 the Systems Engineering Handbook and the Systems Engineering Body of Knowledge It provides a sound trade off analysis framework to generate the tradespace and evaluate value and risk to support system decision making throughout the life cycle Trade off analysis and risk analysis techniques are examined The authors present an integrated value trade off and risk analysis framework based on decision theory These trade off analysis concepts are illustrated in the different life cycle stages using

multiple examples from defense and commercial domains Provides techniques to identify and structure stakeholder objectives and creative doable alternatives Presents the advantages and disadvantages of tradespace creation and exploration techniques for trade off analysis of concepts architectures design operations and retirement Covers the sources of uncertainty in the system life cycle and examines how to identify assess and model uncertainty using probability Illustrates how to perform a trade off analysis using the INCOSE Decision Management Process using both deterministic and probabilistic techniques Trade off Analytics Creating and Exploring the System Tradespace is written for upper undergraduate students and graduate students studying systems design systems engineering industrial engineering and engineering management This book also serves as a resource for practicing systems designers systems engineers project managers and engineering managers Gregory S Parnell PhD is a Research Professor in the Department of Industrial Engineering at the University of Arkansas He is also a senior principal with Innovative Decisions Inc a decision and risk analysis firm and has served as Chairman of the Board Dr Parnell has published more than 100 papers and book chapters and was lead editor of Decision Making for Systems Engineering and Management Wiley Series in Systems Engineering 2nd Ed Wiley 2011 and lead author of the Handbook of Decision Analysis Wiley 2013 He is a fellow of INFORMS the INCOSE MORS and the Society for Decision Professionals
