Where Humans Meet Machines Innovative Solutions For Knotty Natural Language Problems:

Where Humans Meet Machines Amy Neustein, Judith A. Markowitz, 2013-06-22 Editors Amy Neustein and Judith A. Markowitz have recruited a talented group of contributors to introduce the next generation of natural language technologies to resolve some of the most vexing natural language problems that compromise the performance of speech systems today. This fourteen chapter anthology consists of contributions from industry scientists and from academicians working at major universities in North America and Europe. They include researchers who have played a central role in DARPA funded programs and developers who craft real world solutions for corporations. This anthology is aimed at speech engineers, system developers, computer scientists, AI researchers and others interested in utilizing natural language technology in both spoken and text based applications.

Human Language Technologies for Under-Resourced African Languages Moses Effiong Ekpenyong, 2018-01-25 This book provides an overview of a recent and flexible approach to speech synthesis design to develop the first statistical parametric speech synthesizer for Ibibio, a West African tonal language. The design precludes the inflexibility encountered when modeling tonal features of the language and can be used for other tonal African languages. Mobile use and technological innovations in developing African nations have exploded. With mobile technology, many of the barriers caused by infrastructure issues have vanished. In order to address issues that are unique to African tonal languages, the book uses Ibibio as a model. The text reviews the language's speech characteristics required for building the front end components of the design and proposes a finite state transducer (FST) useful for modelling the language's tonal features. The statistical parametric approach discussed in the text implements the Hidden Markov Model (HMM) technique with the goal of creating a generic structure that learns the model from the text itself and uses the data driven approach to input specification.

Network and Parallel Computing Xiaoliang Wang, **Multiword Units in Machine Translation and Translation Technology** Ruslan Mitkov, Johanna Monti, Gloria Corpas Pastor, Violeta Seretan, 2018-07-15 The correct interpretation of Multiword Units (MWUs) is crucial to many applications in Natural Language Processing but is a challenging and complex task. In recent years, the computational treatment of MWUs has received considerable attention but there is much more to be done before we can claim that NLP and Machine Translation (MT) systems process MWUs successfully. This volume provides a general overview of the field with particular reference to Machine Translation and Translation Technology and focuses on languages such as English, Basque, French, Romanian, German, Dutch, and Croatian among others. The chapters of the volume illustrate a variety of topics that address this challenge, such as the use of rule-based approaches, compound splitting techniques, MWU identification methodologies in multilingual applications, and MWU alignment issues.

Computer Interpretation of Metaphoric Phrases Sylvia Weber Russell, 2015-11-13 The computational approach of this book is aimed at simulating the human ability to understand various kinds of phrases with a novel metaphoric component. That is, interpretations of metaphor as literal paraphrases are based on literal meanings of the metaphorically used words. This

method distinguishes itself from statistical approaches which in general do not account for novel usages and from efforts directed at metaphor constrained to one type of phrase or to a single topic domain The more interesting and novel metaphors appear to be based on concepts generally represented as nouns since such concepts can be understood from a variety of perspectives The core of the process of interpreting nominal concepts is to represent them in such a way that readers or hearers can infer which aspects of the nominal concept is likely to be intended to be applied to its interpretation These aspects are defined in terms of verbal and adjectival predicates A section on the representation and processing of part sentence verbal metaphor will therefore also serve as preparation for the representation of salient aspects of metaphorically used nouns As the ability to process metaphorically used verbs and nouns facilitates the interpretation of more complex tropes computational analysis of two other kinds of metaphorically based expressions are outlined metaphoric compound nouns such as idea factory and together with the representation of inferences modified metaphoric idioms such as Put the cat back into the bag *Language Production, Cognition, and the Lexicon* Núria Gala, Reinhard Rapp, Gemma
