#### **DEVICE DESCRIPTION:**

There is no one device that is named "NMEA GPS". NMEA stands for the National Marine Electronics Association, a group that defined the NMEA 0183 Standard for interfacing marine electronics devices. NMEA is a voluntary industry standard, first released in March of 1983. The NMEA 0183 Standard defines electrical signal requirements, data transmission protocol, timing and specific sentence formats for a serial data bus. Most GPS manufacturers have designed their GPS receivers to be able to output positional data that complies with NMEA's defined standards.

NMEA standards are updated from time to time with the latest version (2.30) released in March 1998. The NMEA 0183 standard calls for data communication in the form of coded "sentences." Each sentence begins with the character "\$" and ends with a carriage return and line feed (<CR><LF>). These last two characters are "control" characters and are not normally printed (for this reason they are shown enclosed in brackets). Between the beginning and end of each sentence are "fields" of data, each field separated by a comma. The first field in any sentence (field 0) begins with the two-letter talker mnemonic code ("talkers" are devices that send out information, "listeners" take it in) followed by the three-letter code for the sentence.

In terms of GPS positional data, there are two specific data strings that can be generated by the GPS receivers, and likewise used by WinFrog: "GGA" and "GLL". If possible, it is preferable to utilize the GGA data string as it contains more quality control information than the GLL message.

GPS receivers are also usually capable of outputting accurate GPS time information in the form of the NMEA "ZDA" message. WinFrog can be configured to synchronize its time to the more accurate GPS time.
