Patent Office,1918 A Supplement to Allibone's Critical Dictionary of English Literature and British and American Authors John Foster Kirk,1891 **Fungal Associations** B. Hock,2013-04-17 Mycology the study of fungi originated as a subdiscipline of botany and was a descriptive discipline largely neglected as an experimental science until the early years of this century A seminal paper by Blakeslee in 1904 provided evidence for self incompatibility termed heterothallism and stimulated interest in studies related to the control of sexual reproduction in fungi by mating type specificities Soon to follow was the demonstration that sexually reproducing fungi exhibit Mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi The names Burgeff Kniep and Lindegren are all associated with this early period of fungal genetics research These studies and the discovery of penicillin by Fleming who shared a Nobel Prize in 1945 provided further impetus for experimental research with fungi Thus began a period of interest in mutation induction and analysis of mutants for biochemical traits Such fundamental research conducted largely with *Neurospora crassa* led to the one gene one enzyme hypothesis and to a second Nobel Prize for fungal research awarded to Beadle and Tatum in 1958 Fundamental research in biochemical genetics was extended to other fungi especially to *Saccharomyces cerevisiae* and by the mid 1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena **Fungal Associations** Karl Esser,Paul A. Lemke,1994 This volume highlights fungal associations as they are found in mycorrhizas lichens and other fungal symbioses The emphasis is laid upon the molecular biochemical and ultrastructural analysis of these interactions Major progress has been achieved over the last few years by the systematic application of modern methods developed mainly in molecular biology The data are presented in high quality illustrations leading the reader from the subcellular to higher levels of organization where specific symbiotic traits become apparent Early stages of symbiotic interactions are of special interest They are compared to parasitic interrelations and also considered from an evolutionary standpoint
