changed by the International Committee on Taxonomy of Viruses ICTV into Torque teno virus permitting the further use of the abbreviation TTV Although initially suspected to play a role in non A E hepatitis subsequent studies failed to support this notion Within a remarkably short period of time it became clear that TT viruses are widely spread globally infect a large proportion of all human populations studied thus far and represent an extremely heterogeneous group of viruses now labelled as Anelloviruses TT virus like infections have also been noted in various animal species The classification of this virus group turns out to be difficult their DNA contains between 2200 and 3800 nucleotides related so called TT mini viruses and a substantial proportion of intragenomic recombinants further complicate attempts to combine these viruses into a unifying phylogenetic concept *The British National Bibliography* Arthur James Wells, 2005 **Medical and Health Care Books and Serials in Print**, 1986 **Medical Books and Serials in Print**, 1984 Subject Guide to Books in Print, 1993 *Historical Perspective of Rabies in Europe and the Mediterranean Basin* Arthur A.
