Decolonizing Civil Society in Mozambique Tanja Kleibl,2021-08-26 By demonstrating that Western conceptions of civil society have provided the framework for interpreting societies in the Global South Decolonizing Civil Society in Mozambique argues that it is only through a critical deconstruction of these concepts that we can start to re balance global power relationships both in academic discourse and in development practices Examining the exclusionary discourses framing the support for Western type NGOs in the development discourse often to the exclusion of local social actors this book dissects mainstream contemporary ideas about civil society and finds a new means by which to identify local forms of social action often based in traditional structures and spiritual discourses Outlining new conceptual ideas for an alternative framing of Mozambique s civil society Kleibl proposes a series of fresh theoretical issues and questions alongside empirical research moving towards a series of new policy and practice arguments for rethinking and decolonizing civil society in the Global South

Career Development as a Partner in Nation Building Australia Wendy Patton,2019-07-15 Despite examples of vocational guidance practice being evident in Australia since the mid 1800s there remains a spasmodic and patchwork approach to practice across the country For decades it is a field which has been paradoxically boosted and challenged by changing economic and political agendas Repeated international national and State reviews emphasise the vital nature of a systemic national approach to career development however authors repeatedly lament the lack of a sustained focus on career

activity as a major national priority There is no broad comprehensive historical reckoning of the history of career development theory and practice in Australia since this early period Career development theory and practice in Australia has been forged in partnership with developments in an international context In documenting the shared history with other countries the author significantly adds to the body of knowledge on career development as a field in Australia and internationally The book provides new understandings about the historical development of this field of knowledge and in particular the challenging and cyclical nature of its policy history

stick *The Oxford Handbook of Reciprocal Adult Development and Learning* Carol Hoare, 2011-09-06 One of the Best Books of 2011 from the Center for Optimal Adult Development The fields of adult development and the study of learning have traditionally been considered separate with development falling under psychology and learning under education However recent ideas research and practices that have emerged in these fields of study effectively emphasize the inherent reciprocal relationship that exists between them advances in development frequently lead to learning and conversely learning almost necessarily fuels development In this second edition of *The Oxford Handbook of Reciprocal Adult Learning and Development* the synchronicity between development and learning is explored further as expert authors advance the latest theories to provide a rich foundation for this new area of study and practice for this interrelated field of study At the border of two disciplines this handbook focuses on the capacities of intelligence meta cognition insight self efficacy spirituality interpersonal competence wisdom and other key adult attributes as they relate to positive changes and personal growth in adults Contexts for development and learning e g the work role and environment are also addressed and mixed in throughout the volume are emanating implications for research practice and policy What emerges is a thoughtful handbook for all who promote optimal aging and is a must read for academics psychologists and practitioners in adult development **Big**

Picture Perspectives on Planetary Flourishing Nicholas Hedlund, Sean Esbjörn-Hargens, 2022-07-29 This book split across two volumes is a follow up and companion to *Metatheory for the Twenty First Century* Routledge 2016 All three of these volumes are the dialogical outcome of a multi year symposia series wherein critical realists and integral theorists deeply engaged each other and their distinct but complementary approaches to integrative metatheory Whereas *Metatheory for the Twenty First Century* is primarily theoretical in its focus *Big Picture Perspectives for Planetary Flourishing* *Metatheory for the Anthropocene* aims to more concretely and practically address the complex planetary crises of a new era that many scholars now refer to as the Anthropocene In this first of two new volumes participants of the symposia series articulate a variety of big picture perspectives and transformative interventions in the domains of society and economics social psychology and education Together these chapters demonstrate how integrative metatheory and its application can make powerful contributions to planetary flourishing in the Anthropocene With one of the defining characteristics of the Anthropocene being the sheer complexity and multi valent nature of our interconnected global challenges these volumes crucially present new forms of scholarship that can adequately weave together insights from multiple disciplines into new forms of metapraxis As such this book will be of interest to students scholars and practitioners in the areas of philosophy social theory critical realism integral studies metamodernism and current affairs generally *Perspectives on Mathematical Practices* Bart van Kerkhove, Jean Paul van Bendegem, 2007-06-01 Philosophy of mathematics today has transformed into a very complex network of diverse ideas viewpoints and theories Sometimes the emphasis is on the classical foundational work often connected with the use of formal logical methods sometimes on the sociological dimension of the mathematical

research community and the products it produces then again on the education of future mathematicians and the problem of how knowledge is or should be transmitted from one generation to the next The editors of this book felt the urge first of all to bring together the widest variety of authors from these different domains and secondly to show that this diversity does not exclude a sufficient number of common elements to be present In the eyes of the editors this book will be considered a success if it can convince its readers of the following that it is warranted to dream of a realistic and full fledged theory of mathematical practices in the plural If such a theory is possible it would mean that a number of presently existing fierce oppositions between philosophers sociologists educators and other parties involved are in fact illusory
