Associations Between Quality of Life and the Spiritual and Religious Beliefs and Practices of Men with Prostate Cancer Johanna Jacoba Mytko, 1999 Little is known about the relationships among religiosity spirituality and quality of life in cancer patients Stress related to the cancer experience may elicit reliance on religiosity and spirituality Of the few published studies of religiosity and spirituality in cancer patients most have found these

variables positively related to quality of life and psychological well being Theoretical models of quality of life have often included religiosity and spirituality yet until recently these variables have been neglected in quality of life measurement This study was the first to measure religiosity spirituality and quality of life in prostate cancer patients and to use several measures of each construct The 150 men participating in the study endorsed levels of religiosity and spirituality comparable to other cancer patients and higher than healthy laypersons A factor analysis of religiosity and spirituality items revealed two factors 1 Beliefs and Practices and 2 Meaning and Peace Consistent with prior research married men reported more Meaning and Peace than unmarried men and African American and Christian men reported higher levels of beliefs and practices than Caucasian or non Christian men Relationships between the Meaning and Peace and Beliefs and Practices subscales indicate that these factors overlap but measure separate aspects of religiosity and spirituality Subscales related to beliefs and practices were consistently associated with social and relational well being whereas most quality of life components including physical well being were associated with the Meaning and Peace factor In addition Meaning and Peace contributed unique variance to global quality of life across three quality of life measures after controlling for demographic variables and quality of life subscales These findings support prior research demonstrating a relationship between religiosity spirituality and quality of life in cancer patients and suggest the need for future studies clarifying this complex relationship In addition to the clinical implications of these findings theoretical and methodological issues are discussed

Plante, 2009 This book is for mental health practitioners who want to enhance their clients psychological wellbeing using therapeutic tools drawn from spiritual and religious thought What can a non religious therapist do when a client directly requests help with a problem involving spiritual matters How can a therapist who is engaged in a religious tradition frame strategies such as discerning vocation participating in spiritual or religious rituals and forgiving in ways that are acceptable to secular clients Thomas Plante answers these questions and more by presenting thirteen tools to improve psychological and spiritual health that can be integrated into secular or religious oriented practice Spiritual Practices in Psychotherapy first reviews history philosophy and research behind and evidence for integrating tools such as meditation learning from spiritual models and becoming part of something larger than oneself into therapy practice Dr Plante makes a case for integrating spiritual and religious tools in therapy as part of ethical practice and as a way to add value to
