

THERMAL ENERGY READINGS & QUESTIONS

Types of Heat Transfer

Temperature differences are what drive heat transfer. For the air conditioner, convection, and radiation.

Convection is heat transfer by the movement of the fluid. As air is heated, it expands and becomes less dense. This makes the air rise and the cooler air sinks. This is how the air circulates in a room. Convection also occurs in the ocean. Cooler water sinks and warmer water rises.

Radiation is heat transfer by the electromagnetic waves. All objects emit thermal energy in the form of electromagnetic waves. The sun is a source of thermal energy.

Particle Arrangement

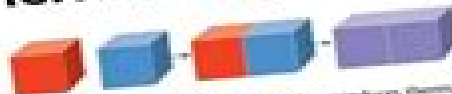

To understand how heat is transferred, we need to know how particles are arranged in different states of matter.

On Earth, all matter is in one of three states: solid, liquid, or gas.

Figure 1.1: Solid

Thermal Equilibrium

Particles are always vibrating and this vibrating motion produces thermal energy. All matter is constantly vibrating, so all matter has some amount of thermal energy. Heat transfer is how thermal energy moves from one place to another. Lucky for us, it is easy to predict how heat moves. Thermal energy will always travel from warmer objects to cooler objects until the energy is equally distributed. When you have two objects that are at different temperatures, thermal energy moves from the warmer object to the cooler object until they are both at the same temperature. This is called **thermal equilibrium**.

Thermal Equilibrium Questions

Name: _____

Read the text Thermal Equilibrium and then answer the questions below.

Types of Heat Transfer Questions

Name: _____

Read the text Types of Heat Transfer and then answer the questions below.

Name: _____

Read the text Particle Arrangement and then answer the questions below.

1. How do particles in a solid differ from particles in a liquid?

2. How do particles in a liquid differ from particles in a gas?

3. How do particles in a gas differ from particles in a plasma?

4. How do particles in a plasma differ from particles in a solid?

5. How do particles in a solid differ from particles in a liquid?

6. How do particles in a liquid differ from particles in a gas?

7. How do particles in a gas differ from particles in a plasma?

8. How do particles in a plasma differ from particles in a solid?

9. How do particles in a solid differ from particles in a liquid?

10. How do particles in a liquid differ from particles in a gas?
