cell to cell attachment or through the release of chemicals The contributions to this Research Topic investigate direct or indirect interactions between bacteria and phytoplankton using chemical physiological and or genetic approaches Topics include nutrient and vitamin acquisition algal pathogenesis microbial community structure during algal blooms or in algal aquaculture ponds cell cell interactions chemical exudation signaling molecules and nitrogen exchange These studies span true symbiosis where the interaction is evolutionarily derived as well as those of indirect interactions such as bacterial incorporation of phytoplankton produced organic matter and man made synthetic symbiosis synthetic mutualism *Monthly Catalog of United States Government Publications* United States.
