Transboundary Governance Of Biodiversity Legal Aspects Of Sustainable Development:

Transboundary Governance of Biodiversity Louis J. Kotzé, Thilo Marauhn, 2014-06-26 This book compiles critical analysis of the regulatory frameworks applicable to the transboundary governance of biodiversity by specialists from Europe and Africa. Drawing on their vast experience as lawyers, political scientists and natural resource management experts, they provide a critique and contemporary perspectives on what has become one of the most challenging aspects of global environmental governance in the Anthropocene: effective biodiversity conservation in times of unprecedented environmental crises. With a unique North-South focus and a legal focus infused by multi-disciplinary regulatory dimensions, this peer-reviewed publication offers a comprehensive analysis of international and regional environmental law frameworks applicable to the transboundary governance of biodiversity.

Legal Aspects of Sustainable Development Volker Mauerhofer, 2015-11-26 This book addresses legal aspects of sustainable development and offers the latest thinking on a wide range of current themes. By taking a cross-cutting approach, it adds considerably to the exploration of this emerging scientific field. Twenty-nine original contributions present innovative thoughts and replicable ideas from this exciting new area, which will be of value to practitioners and researchers alike. These contributions are allocated into a horizontal and sectorial part. The section covering horizontal policies has five sub-parts: 1. general aspects, 2. human and intellectual property rights, 3. communication and social enterprise governance, 4. public participation, and 5. assessment tools. The second part on sectorial policies also has five sub-parts: 1. forest and water management, 2. renewable energy, 3. cities, waste and material management, 4. biodiversity, nature conservation, oceans and spatial planning, and 5. agriculture and rural policy. It offers a multifaceted discussion of sustainable development and law by authors from five continents and from both the public and the private sectors. This selection guarantees a broad view that presents the more theoretical arguments from the academic as well as the practical perspective. Furthermore, the authorship includes senior, highly experienced academics and practitioners as well as those at the start of their career. This ensures thoughtful expansions of established theories as well as the emergence of innovative ideas. Moreover, the ten sub-parts bring together like-minded thoughts, resulting in an exchange of different viewpoints on a similar theme. This allows the readers to concentrate on individual chapters while at the same time discovering a variety of thoughts and ideas.

Legal Aspects of Implementing the Cartagena Protocol on Biosafety Marie-Claire Cordonier Segger, Frederic Perron-Welch, Christine Frison, 2013-01-28 This book, the first in a series that focuses on treaty implementation for sustainable development, examines key legal aspects of implementing the Cartagena Protocol on Biosafety to the UN Convention on Biological Diversity (CBD) at national and international levels. The volume provides a serious contribution to the current legal and political academic debates on biosafety by discussing key issues under the Cartagena Protocol on Biosafety that affect the further design of national and international law on biosafety and analyzing progress in the development of domestic regulatory regimes for biosafety. In the year of the fifth UN Meeting

of the Parties to the Cartagena Protocol on Biosafety at the signature of a new Nagoya Kuala Lumpur Protocol on Liability and Redress this timely book examines developments in biosafety law and policy

International Governance of the Arctic Marine Environment Lilly Weidemann, 2014-04-09 The Arctic is particularly affected by climate change over the past few decades temperatures in this area have risen twice as fast as the mean global rate The most prominent effect of global climate change in the region is the melting sea ice in the Arctic Ocean which enables a multitude of ocean uses to be initiated and extended such as shipping fishing and oil and gas extraction Unlike in the Antarctic there is currently no single comprehensive legal regime for governance of the Arctic Instead the region is regulated by a patchwork of international treaties above all the United Nations Convention on the Law of the Sea UNCLOS various regional and sub regional agreements national laws and soft law agreements This treatise provides an evaluation of the governance regime that regulates the use of the Arctic marine environment and its readiness to protect these fragile ecosystems in light of the consequences of climate change

Global Environmental Constitutionalism in the Anthropocene Louis J Kotzé, 2016-09-22 There is persuasive evidence suggesting we are on the brink of human induced ecological disaster that could change life on Earth as we know it There is also a general consensus among scientists about the pace and extent of global ecological decay including a realisation that humans are central to causing the global socio ecological crisis This new epoch has been called the Anthropocene Considering the many benefits that constitutional environmental protection holds out in domestic legal orders it is likely that a constitutionalised form of global environmental law and governance would be better able to counter the myriad exigencies of the Anthropocene This book seeks to answer this central question from the perspective of the Anthropocene what is environmental constitutionalism and how could it be extrapolated to formulate a global framework In answering this question this book offers the first systematic conceptual framework for global environmental constitutionalism in the epoch of the Anthropocene

Does the UN Model Still Work? Challenges and Prospects for the Future of Multilateralism, 2022-11-28 Composed of original articles from academics and policy notes from practitioners this book attempts to draw up the state of multilateralism through the UN model and identify potential ways to address its challenges and shortcomings The contributors question the role of multilateralism sometimes accused of being fragmented inefficient and unrepresentative and its impact on global governance democracy trade and investment the environment and human rights Since most of the authors are not from the UN system the content of the contributions provides an external and more neutral assessment of the UN's ability to continue to function today as a serious actor within a global movement in favor of a renewed form of multilateralism Does the UN Model Still Work Challenges and Prospects for the Future of Multilateralism is now available in paperback for individual customers

Groundwater and Climate Change Philippe Cullet, Raya Marina Stephan, 2018-08-30 This book undertakes a scholarly assessment of the state of the art of law and policy perspectives on groundwater and climate change at the international regional and national levels A particular

focus is given to India which is the largest user of groundwater in the world and where groundwater is the primary source of water for domestic and agricultural uses The extremely rapid rise in groundwater use in many Indian states has led to a growing groundwater crisis that they must address The existing regulatory framework has not adapted to the challenges and fails to address any environmental concerns On climate change India has adopted a policy framework that makes the link with water but no legislation has followed up to make the link operational The subject matter of this book has been widely debated with regard to each of its main two components separately Bringing these two domains together is what makes this book unique The link between climate change and groundwater has been acknowledged to some extent and there is growing interest in studying the impacts of climate change on ground water Similarly in water and environmental law and policy increasing attention has been given to the study of climate change and groundwater legal and policy frameworks but generally separately This book contributes to filling this knowledge gap by drawing on contributions from leading experts in the field of environmental and water law and policy who have been involved in climate change and or groundwater research The chapters in this book were originally published in a special issue of Water International

International Law and Agroecological Husbandry John W. Head, 2016-11-25

Remarkable advances are being made in life science and agricultural research to reform the methods of food production particularly with regard to staple grain and legume crops in ways that will better reflect ecological realities However advances in science may be insufficient to ensure that these possibilities for agricultural reform are realized in practice and in a sustainable way This book shows how these can only be achieved through changes in legal norms and institutions at the global level Interdisciplinary in character the book draws from a range of issues involving agricultural innovation international legal history and principles treaty commitments global institutions and environmental challenges such as climate change to propose broad legal changes for transforming global agriculture It first shows how modern extractive agriculture is unsustainable on economic environmental and social grounds It then examines the potential for natural systems agriculture especially perennial polyculture systems for overcoming the deficiencies of modern extractive agriculture especially to offset climate change Finally it analyses closely the legal innovations that can be adopted at national and international levels to facilitate a transition from modern extractive agriculture to a system based more on ecological principles In particular the author argues for the creation of a Global Convention on Agroecology
