Transporte De Mercancías Peligrosas Transporte De Mercancías Peligrosas:

Mercancías Peligrosas - Curso Básico, 2009 *Transporte de mercancías peligrosas* Francisco Carmona Pastor, 2002

El transporte de mercancías peligrosas es una actividad socioeconómica tradicionalmente teñida de particularismo propio con una veloz tecnificación y avance que hace que la persona experta en esta materia deba evolucionar al mismo tiempo y que tanto el transportista como el usuario precisen conocer y poder aplicar sus técnicas. Al profano no le es sencillo entrar en el complejo y tecnificado mundo del Transporte de Mercancías Peligrosas misma en realidad tan complicada como son los Explosivos. Muchas veces un enfoque inicial erróneo y la propia aridez del tema aparte de su propia fascinación ponen de manifiesto hasta qué punto son importantes y vigentes los problemas de esta realidad del transporte que en consecuencia deben reducirse para el logro de una buena gestión. El cuerpo de doctrina y la sistematización de la experiencia que encierra la obra tienden a que la tarea de conducir y aglutinar las acciones de las personas encargadas de los Fletamentos y Transportes, Consejeros de Seguridad, Gerentes, Directores Comerciales y Directores de Marketing vayan hacia unos objetivos comunes mediante la interacción en las operaciones.

Sistemas de Información Medioambiental José Manuel Cotos Yáñez, José Ángel Taboada González, 2003-09. La grave degradación del medioambiente que la acción del hombre ha provocado en el último siglo ha despertado en las sociedades más avanzadas la preocupación por su conservación. Además la facilidad con la que errores humanos o acciones deliberadas provocan catástrofes ha exigido su vigilancia. Tratamos en este libro la aportación de las Tecnologías de la Información TI a la conservación y protección del medioambiente dividiéndolo en dos partes claramente diferenciadas. La primera parte del libro introduce al lector en la teoría de las tecnologías utilizadas. La distribución espacial de la información utilizada justifica el uso extensivo de los Sistemas de Información Geográfica que aaden a los Sistemas de Información clásicos soportados por las Bases de Datos la necesaria gestión espacial. Asimismo el volumen de información normalmente manejada hace necesario su análisis automático a través de novedosas técnicas introducidas en los dos últimos capítulos de esta primera parte. Ya en la segunda parte del libro se presentan al lector un conjunto de aplicaciones funcionando en la actualidad que muestran el uso práctico de estas tecnologías. Entre ellas cabe destacar el Sistema de Información Ambiental puesto en marcha por la Xunta de Galicia la clasificación de usos del suelo a partir de datos in situ e imágenes de satélite desarrollada por el SITGA ambos claros ejemplos del manejo de datos espacialmente distribuidos. Otras aplicaciones atienden además a la gestión en tiempo real de los datos como el sistema de Gestión de Medios Aéreos, Contraincendios, la gestión de residuos sólidos urbanos o el control energético.
