paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range. Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers. Alas, organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program. The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems. It contains various theoretical approaches to the recognition problem based on mathematical statistics, fuzzy sets, morphological methods, wavelets, syntactic methods, genetic algorithms, artificial neural networks, ontological models etc. Most attention is still paid to visual objects recognition, however, acoustic, textual and other objects are also considered. Among application areas, medical problems are in majority, recognition of faces, speech signals and textual information processing methods being also investigated.

Advanced High Voltage Power Device Concepts B. Jayant Baliga, 2011-09-21. The devices described in *Advanced MOS Gated Thyristor Concepts* are utilized in microelectronics production equipment in power transmission equipment and for very high power motor control in electric trains, steel mills etc. Advanced concepts that enable improving the performance of power thyristors are discussed here along with devices with blocking voltage capabilities of 5 000 V, 10 000 V and 15 000 V. Throughout the book, analytical models are generated to allow a simple analysis of the structures and to obtain insight into the underlying physics. The results of two dimensional simulations are provided to corroborate the analytical models and give greater insight into the device operation. *Texture Analysis for Magnetic Resonance Imaging* Milan Hájek, 2006.

Computer Vision and Graphics K. Wojciechowski, B. Smolka, H. Palus, R.S. Kozera, W. Skarbek, L. Noakes, 2006-03-11. As the speed capabilities and economic advantages of modern digital devices continue to grow, the need for efficient information processing especially in computer vision and graphics dramatically increases. Growth in these fields stimulated by emerging applications has been both in concepts and techniques. New ideas, concepts and techniques are developed, presented, discussed and evaluated, subsequently expanded or abandoned. Such processes take place in different forms in various fields of the computer science and technology. The objectives of the ICCVG are presentation of current research topics and discussions leading to the integration of the community engaged in machine vision and computer graphics, carrying out and supporting research in the field and finally promotion of new applications. The ICCVG is a continuation of the former International Conference on Computer Graphics and Image Processing called GKPO held in Poland every second year in May since 1990, organized by the Institute of Computer Science of the Polish Academy of Sciences, Warsaw and chaired by the Editor of the International Journal of Machine Graphics and Vision Prof. Wojciech S. Mokrzycki.
