Theory Of Relations R Fra Iuml Ss Eacute:

Theory of Relations R. Fraïssé, 2000-12-15 Relation theory originates with Hausdorff Mengenlehre 1914 and Sierpinski Nombres transfinis 1928 with the study of order types specially among chains total orders linear orders One of its first important problems was partially solved by Dushnik Miller 1940 who starting from the chain of reals obtained an infinite strictly decreasing sequence of chains of continuum power with respect to embeddability In 1948 I conjectured that every strictly decreasing sequence of denumerable chains is finite This was affirmatively proved by Laver 1968 in the more general case of denumerable unions of scattered chains ie which do not embed the chain $\mathbb{Q}$ of rationals by using the barrier and the better ordering of Nash Williams 1965 to 68 Another important problem is the extension to posets of classical properties of chains For instance one easily sees that a chain A is scattered if the chain of inclusion of its initial intervals is itself scattered 6 1 4 Let us again define a scattered poset A by the non embedding of $\mathbb{Q}$ in A We say that A is finitely free if every antichain restriction of A is finite antichain set of mutually incomparable elements of the base In 1969 Bonnet and Pouzet proved that a poset A is finitely free and scattered iff the ordering of inclusion of initial intervals of A is scattered In 1981 Pouzet proved the equivalence with the a priori stronger condition that A is topologically scattered see 6 7 4 a more general result is due to Mislove 1984 ie every non empty set of initial intervals contains an isolated elements for the simple convergence topology In chapter 9 we begin the general theory of relations with the notions of local isomorphism free interpretability and free operator 9 1 to 9 3 which is the relationist version of a free logical formula This is generalized by the back and forth notions in 10 10 the k p operator is the relationist version of the elementary formula first order formula with equality Chapter 12 connects relation theory with permutations theorem of the increasing number of orbits Livingstone Wagner in 12 4 Also in this chapter homogeneity is introduced then more deeply studied in the Appendix written by Norbert Saucier Chapter 13 connects relation theory with finite permutation groups the main notions and results are due to Frasnay Also mention the extension to relations of adjacent elements by Hodges Lachlan Shelah who by this mean give an exact calculus of the reduction threshold The book covers almost all present knowledge in Relation Theory from origins Hausdorff 1914 Sierpinski 1928 to classical results Frasnay 1965 Laver 1968 Pouzet 1981 until recent important publications Abraham Bonnet 1999 All results are exposed in axiomatic set theory This allows us for each statement to specify if it is proved only from ZF axioms of choice the continuum hypothesis or only the ultrafilter axiom or the axiom of dependent choice for instance

Theory of Relations R. Fraïssé, 2011-08-18 The first part of this book concerns the present state of the theory of chains total or linear orderings in connection with some refinements of Ramsey's theorem due to Galvin and Nash Williams This leads to the fundamental Laver's embeddability theorem for scattered chains using Nash Williams better quasi orderings barriers and forerunning The second part chapters 9 to 12 extends to general relations the main notions and results from order type theory An important connection appears with permutation theory Cameron Pouzet Livingstone and Wagner and with logics

existence criterion of Pouzet Vaught for saturated relations The notion of bound of a relation due to the author leads to important calculus of thresholds by Frasnay Hodges Lachlan and Shelah The redaction systematically goes back to set theoretic axioms and precise definitions such as Tarski's definition for finite sets so that for each statement it is mentioned either that ZF axioms suffice or what other axioms are needed choice continuum dependent choice ultrafilter axiom etc
