Powlesland,E. S. Moody,AERONAUTICAL RESEARCH LABS MELBOURNE (Australia),1986 The advent of the micro computer and in particular its application to test and control instrumentation has resulted in the development of many highly sophisticated measuring instruments and controllers able to perform a very wide range of functions In most cases the range is so wide that without recourse to appropriate manuals the average operator is unable to take advantage of more than a small percentage of the facilities available While the family of micro computer based instruments covered by this manual are essentially single purpose devices in the sense that each has been designed to perform a particular task the full potential of their ability to perform these tasks will only be realized if careful attention is paid to the procedures discussed in this manual The family of instruments covered by this manual comprises 1 Single channel load sequence programmers used to generate the load sequence signals to be applied to the input port of a servo hydraulic testing machine 2 Single and dual channel controllers which in addition to providing the load sequence signals control the loads being applied to the test specimen by including a servo hydra controller and manual valve controls and 3 Eight input data acquisition modules able to measure and store responses induced in the test specimen by the applied load sequence **Basic Control Monitor** Scientific Data Systems,1969
