Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre-existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the coordination

of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research.

The Vocabulary Book Michael F. Graves, 2016. This extensively revised and expanded edition of the bestselling text and teaching resource incorporates the newest research in vocabulary learning and instruction into a complete and balanced program for all K-12 students from those who struggle in school to those who excel. Literacy expert Michael Graves presents a four pronged vocabulary program that he has developed and honed for over 30 years. The program has the following four components: Frequent Varied and Extensive Language Experiences, Teaching Individual Words, Teaching Word Learning Strategies, and Fostering Word Consciousness. The text includes theory research based strategies, vocabulary interventions, classroom examples, advice for working with English learners, discussion of next generation standards and more. The Vocabulary Book Second Edition will appeal to reading and subject area teachers, teacher educators and school district and state leaders. New for the Second Edition: Instructional approaches developed and classroom tested since the release of the first edition; A chapter specifically on teaching vocabulary to English learners; A chapter specifically on selecting vocabulary words to teach; Curricular and instructional elements designed to meet and exceed Common Core State Standards; An emphasis on vocabulary as a vital resource for all students in our increasingly diverse society. If you believe vocabulary instruction is vital to reading, writing and thinking then Michael Graves Second Edition of The Vocabulary Book will give you the tools for powerful instruction as many teachers discovered with the First Edition. This book will shift your perspective and you will reap the benefits of placing vocabulary at the center of your instruction. Peter Dewitz, district level reading consultant, Mary Baldwin College. Now that vocabulary is included on the Nation's Report Card, teachers will want to know how to help students increase their word power. Graves's advice will be invaluable in what to do and what not to do. Robert Calfee, professor emeritus, Stanford University. This book is an excellent resource for practitioners interested in developing a comprehensive program for building vocabulary in children. It is also of great value for researchers who wish to design and test vocabulary interventions. Diane August, senior research scientist, Center for Applied Linguistics.
