Araujo, Jacobus Henri De Waard, Christophe J. Queval, 2022-07-01 Neglected Diseases in Monkeys Sascha Knauf, Lisa Jones-Engel, 2020-12-14 This book offers a valuable resource reviewing the current state of knowledge concerning the pathology and epidemiology of infectious diseases in both captive and wild monkeys. The One Health concept forms the framework of all chapters. The multidisciplinary team of authors addresses neglected diseases caused by the three major pathogen groups: bacteria, viruses, and parasites. Moreover, the volume discusses key virulence factors such as the evolution of antibiotic resistance and the ecological drivers of and human influence on pathogen transmission. Demonstrating how researchers working on monkeys' diseases are increasingly thinking outside the box, this volume is an essential reference guide to the field of One Health and will serve as an asset for stakeholders in conservation, healthcare, and research organizations that face the challenge of moving beyond classical human-oriented approaches to health. **Tuberculosis in Animals: An African Perspective** Asseged B. Dibaba, Nicolaas P. J. Kriek, Charles O. Thoen, 2019-07-01 This book recounts the biology of *M. bovis* followed by the status of bovine Tuberculosis (bTB) in African countries, primarily based on zoonotic and epidemiological field reports. Since the accumulation of data is valueless unless it led to practicable control measures, emphasis is put on locally adapted protocols for future control of the disease. In order to systematically evaluate the knowledge base of bTB, Epidemiologic Problem Oriented Approach (EPOA) methodology was used. The methodology is composed of two triads: i) the problem identification/characterization triad, which is mainly descriptive in nature, and ii) the problem management/solution/mitigation triad, which is mainly geared toward problem management/solution. See figure. The first triad comprises three pillars: i) agent, ii) host, and iii) environment, and the second one: i) therapeutics/treatment, ii) prevention/control, and iii) health maintenance/promotion. The two triads are linked together by the diagnostic/procedure linkage. The systematic and detailed studies of the Host-Agent-Environment interactions are the building blocks to the understanding of agent transmission pathways and disease spread. These may include data about the disease status of the country, the nature of the disease agent and its hosts, the modes of transmission, the wildlife reservoirs in nature, persistence of infection, and agent survival in animal products and the environment. The problem identification and characterization triad identifies these interactions. Once a problem has been identified and well understood, the next step is to minimize the risk of transmission and spread of a disease. This area, referred to as problem solution/management triad, consists of problem management alternatives that rely upon prevention/control and health maintenance/promotion of the disease in livestock, wildlife, and humans, with the

emphasis on resource poor developing countries in Africa *Women in veterinary epidemiology and economics* Alejandra Victoria Capozzo, Flavie Vial, 2023-06-09 **The Top Ten Diseases of All Time** Stacey Smith?, 2023-10-24 Infectious diseases have been with us for millennia and continue to pose a threat from the irritation of flu season to the potential extinction of our species We instinctively fear them and alter our behaviour as a result The reason we bury bodies six feet deep is because that was the depth that stopped plague transmission from the dead in the Middle Ages Many religious practices such as avoiding certain meats were established because of foodborne disease transmission In The Top Ten Diseases of All Time Stacey Smith presents the top ten deadliest diseases and their effects on society providing a wealth of information about the trajectory and terrible impact of each disease and humanity's reaction to these diseases throughout the millennia Did you know for example that The medical symbol evolved from the worms wrapped around a stick because that was the only way to remove Guinea worms from the body so having a stick meant you were a doctor Smallpox is the third worst disease ever yet it remains the only successfully eradicated human disease but not for long thanks in part to a successful vaccine in part to photographic recognition cards and in part due to helicopter led forced vaccinations of whole villages in the former Yugoslavia This brings up issues of individual rights versus public good that remain relevant today Four diseases were targeted for eradication in the 20th century the failure to do so led directly to the creation of the environmental movement The inability of priests to explain how to stop the plague in the Middle Ages broke the back of the church as an all powerful and all knowing institution and led to colonialism and slavery The Top Ten Diseases of All Time offers a fascinating overview of the deadliest diseases to spread throughout the world including HIV AIDS Spanish Flu Measles The Black Death Smallpox and others Basic Biology and Applications of Actinobacteria Shymaa Enany, 2018-12-05 Actinobacteria have an extensive bioactive secondary metabolism and produce a huge amount of naturally derived antibiotics as well as many anticancer anthelmintic and antifungal compounds These bacteria are of major importance for biotechnology medicine and agriculture In this book we present the experience of worldwide specialists in the field of Actinobacteria exploring their current knowledge and future prospects
