Amy Shira Teitel

Von Braun Dreamer Of Space Engineer Of War:

Von Braun Michael Neufeld,2008-11-11 Curator and space historian at the Smithsonian s National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun Chief rocket engineer of the Third Reich and one of the fathers of the U S space program Wernher von Braun is a source of consistent fascination Glorified as a visionary and vilified as a war criminal he was a man of profound moral complexities whose intelligence and charisma were coupled with an enormous and some would say blinding ambition Based on new sources Neufeld s biography delivers a meticulously researched and authoritative portrait of the creator of the V 2 rocket and his times detailing how he was a man caught between morality and progress between his dreams of the heavens and the earthbound realities of his life

Breaking the Chains of Gravity Amy Shira Teitel,2015-10-22 The incredible story of spaceflight before the establishment of NASA NASA s history is a familiar story one that typically peaks with Neil Armstrong taking his small step on the Moon in 1969 But America s space agency wasn t created in a vacuum It was assembled from pre existing parts drawing together some of the best minds the non Soviet world had to offer In the 1930s rockets were all the rage in Germany the focus both of scientists hoping to fly into space and of the German armed forces looking to circumvent the restrictions of the Treaty of Versailles One of the key figures in this period was Wernher von Braun an engineer who designed the rockets that became the devastating V 2 As the war came to its chaotic conclusion von Braun escaped from the ruins of Nazi Germany and was taken to America where he began developing missiles for the US Army Meanwhile the US Air Force was looking ahead to a time when men would fly in space and test pilots like Neil Armstrong were flying cutting edge rocket powered aircraft in the thin upper atmosphere Breaking the Chains of Gravity tells the story of America s nascent space program its scientific advances its personalities and the rivalries it caused between the various arms of the US military At this point getting a man in space became a national imperative leading to the creation of the National Aeronautics and Space Administration otherwise known as NASA

Our Germans Brian E. Crim,2018-01-15 As this engaging book demonstrates whether characterized as an expedient Cold War program born from military necessity or a dishonorable episode the project ultimately reflects American ambivalence about the military industrial complex and the viability of an ends justifies the means solution to external threats

The Women of the Moon Daniel R. Altschuler,Fernando J. Ballesteros,2019-07-04 Philosophers and poets in times past tried to figure out why the stainless moon smoothly polished like a diamond in Dante s words had stains The agreed solution was that like a mirror it reflected the imperfect Earth Today we smile but it was a clever way to understand the Moon in a manner that was consistent with the beliefs of their age The Moon is no longer the in thing We see it as often as the Sun and give it little thought we ve become indifferent However the Moon does reflect more than just sunlight The Moon or more precisely the nomenclature of lunar craters still holds up a mirror to an important aspect of human history Of the 1586 craters that have been named honoring philosophers and scientists only 28 honor a

woman These 28 women of the Moon present us with an opportunity to meditate on this gap but perhaps more significantly they offer us an opportunity to talk about their lives mostly unknown today *The Province of All Mankind* Stephen Buono, 2025-07-15 *The Province of All Mankind* is the story of a powerful idea about the cosmos Born in the science fiction literature of the nineteenth century and maturing in the Age of Apollo this idea held that outer space should be preserved as a sanctuary from human strife free from weapons warfare and political rivalry If humanity could somehow leave violence behind as it moved into space perhaps peace would finally reign Bucking a half century of space race scholarship Stephen Buono argues that despite waging a totalizing Cold War the United States achieved stunning diplomatic successes that heralded the cosmos as a realm of peace and cooperation The early story of space politics is not primarily one of militarization but rather of political prescience and restraint *The Province of All Mankind* demonstrates that space became a unique domain of American foreign relations and international law and provides lessons for the Second Cold War unfolding over the horizon *Imagining Outer Space* Alexander C.T. Geppert, 2018-04-25 *Imagining Outer Space* makes a captivating advance into the cultural history of outer space and extraterrestrial life in the European imagination How was outer space conceived and communicated What promises of interplanetary expansion and cosmic colonization propelled the project of human spaceflight to the forefront of twentieth century modernity In what way has West European astroculture been affected by the continuous exploration of outer space Tracing the thriving interest in spatiality to early attempts at exploring imaginary worlds beyond our own the book analyzes contact points between science and fiction from a transdisciplinary perspective and examines sites and situations where utopian images and futuristic technologies contributed to the omnipresence of fantasmatic thought Bringing together state of the art work in this emerging field of historical research the volume breaks new ground in the historicization of the Space Age *For the Love of Mars* Matthew Shindell, 2023-05-18 A tour of Mars in the human imagination from ancient astrologers to modern explorers Mars and its secrets have fascinated and mystified humans since ancient times Due to its vivid color and visibility its geologic kinship with Earth and its potential as our best hope for settlement Mars embodies everything that inspires us about space and exploration *For the Love of Mars* surveys the red planet's place in the human imagination beginning with ancient astrologers and skywatchers and ending in our present moment of exploration and virtual engagement National Air and Space Museum curator Matthew Shindell describes how historical figures across eras and around the world have made sense of this mysterious planet We meet Mayan astrologer priests who incorporated Mars into seasonal calendars and religious ceremonies Babylonian astrologers who discerned bad omens figures of the Scientific Revolution who struggled to comprehend it as a world Victorian astronomers who sought signs of intelligent life and twentieth and twenty first century scientists who have established a technological presence on its surface Along the way we encounter writers and artists from each of these periods who take readers and viewers along on imagined journeys to Mars By focusing on the diverse human stories behind the telescopes and behind the

robots we know and love Shindell shows how Mars exploration has evolved in ways that have also expanded knowledge about other facets of the universe Captained by an engaging and erudite expert For the Love of Mars is a captivating voyage through time and space for anyone curious about Curiosity and the red planet **Remembering the Space Age** Steven J. Dick, 2008 From the Publisher Proceedings of October 2007 conference sponsored by the NASA History Division and the National Air and Space Museum to commemorate the 50th anniversary of the Sputnik 1 launch in October 1957 and the dawn of the space age **Remembering the space age: Proceedings of the 50th Anniversary Conference** , *We Could Not Fail* Richard Paul, Steven Moss, 2015-05-01 This surprising and insightful history profiles ten African American engineers mathematicians and others who worked for NASA's space program Lauren Helmuth New York Times Book Review The Space Age began just as the struggle for civil rights forced Americans to confront the bitter legacy of slavery discrimination and violence against African Americans NASA itself became an agent of social change with President Kennedy opening its workplaces to African Americans In *We Could Not Fail* Richard Paul and Steven Moss profile ten pioneer African American space workers whose stories illustrate the role NASA and the space program played in promoting civil rights Paul and Moss recount how these technicians mathematicians engineers and an astronaut candidate surmounted barriers and navigated being the sole African American in a NASA work group These brave and determined men went on to help transform Southern society by integrating colleges patenting new inventions holding elective office and reviving and governing defunct towns Adding new names to the roster of civil rights heroes and a new chapter to the story of space exploration *We Could Not Fail* demonstrates how African Americans broke the color barrier by competing successfully at the highest level of American intellectual and technological achievement
