Usability Evaluation for In-Vehicle Systems Catherine Harvey, Neville A. Stanton, 2013-04-23 Ergonomics often seems to be involved too late in commercial project development processes to have substantive impact on design and usability However in the automotive industry and specifically in relation to In Vehicle Information Systems IVIS a lack of attention to usability can not only lead to poor customer satisfaction it can also present a significant risk to safe and efficient driving Usability Evaluation for In Vehicle Systems describes how to apply a range of usability evaluation methods for IVIS The authors explore the driving context and the range of driver IVIS interactions using case studies that show how Ergonomics methods can add considerable value throughout the product development process They emphasize practical approaches that can be used to predict and analyze driver behavior with IVIS The authors also present validation evidence for the methods covered The book has three key

objectives Define and understand usability in the context of IVIS This guides the specification of criteria against which usability can be successfully evaluated Develop a multi method framework to support designers in the evaluation of IVIS usability The underlying motivations for the framework are a need for early stage evaluation to support proactive redesign and a practical and realistic approach which can be used successfully by automotive manufacturers Develop an analytic usability evaluation method which enables useful predictions of task interaction whilst accounting for the specific context of use of IVIS The major challenge of this particular context of use is the dual task environment created by interacting with secondary tasks via an IVIS at the same time as driving Written for students researchers designers and engineers the book is not only a guide to the practical application of evaluation methods it also presents important theoretical concepts and hypotheses describing the behavior of drivers and the effects of IVIS interactions It provides a framework for developing more usable systems to enhance the overall driving experience by meeting the needs of the driver safety efficiency and enjoyment
