Data for Learning World Bank Group, 2017-09-21 Data are a crucial ingredient in any successful education system but building and sustaining a data system are challenging tasks Many countries around the world have spent significant resources but still struggle to accomplish a functioning Education Management Information System EMIS On the other hand countries that have created successful systems are harnessing the power of data to improve education outcomes Increasingly EMISs are moving away from using data narrowly for counting students and schools Instead they use data to drive system wide innovations accountability professionalization and most important quality and learning This broader use of data also benefits classroom instruction and support at schools An effective data system ensures that education cycles from preschool to tertiary are aligned and that the education system is monitored so it can achieve its ultimate goal producing graduates able to successfully transition into the labor market and contribute to the overall national economy Data for Learning Building a Smart Education Data System and its forthcoming companion volume shed light on challenges in building a data system and provide actionable direction on how to navigate the complex issues associated with education data for better learning outcomes and beyond Data for Learning details the key ingredients of successful data systems including tangible examples common pitfalls and good practices It is a resource for policy makers working to craft the vision and strategic road map of an EMIS as well as a handbook to assist teams and decision makers in avoiding common mistakes It is designed to provide the how to and to guide countries at various stages of EMIS deployment A forthcoming companion volume will focus on digging deeper into the practical applications of education data systems by various user groups in different settings

Values and Valuing in Mathematics Education Philip Clarkson, Wee Tiong Seah, Jeong Suk Pang, 2019-04-24 This engaging open access book discusses how a values and valuing perspective can facilitate a more effective mathematics pedagogical experience and allows readers to explore multiple applications of the values perspective across different education systems It also clearly shows that teaching mathematics involves not only reasoning and feelings but also students interactions with their cultural setting and each other The book brings together the work of world leaders and new thinkers in mathematics educational research to improve the learning and teaching of mathematics Addressing themes such as discovering hidden cultural values a multicultural society and methodological issues in the investigation of values in mathematics it stimulates readers to consider these topics in cross cultural ways and offers suggestions for research and classroom practice It is a valuable resource for scholars of mathematics education from early childhood through to higher education and an inspiring read for all mathematics teachers

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of

mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
