Transportation for Livable Cities Vukan R. Vuchic, 1999 The twenty first century finds civilization heavily based in cities that have grown into large metropolitan areas Many of these focal points of human activity face problems of economic inefficiency environmental deterioration and an unsatisfactory quality of life problems that go far in determining whether a city is livable A large share of these problems stems from the inefficiencies and other impacts of urban transportation systems The era of projects aimed at maximizing vehicular travel is being replaced by the broader goal of achieving livable cities economically efficient socially sound and environmentally friendly This book explores the complex relationship between transportation and the character of cities and metropolitan regions Vukan Vuchic applies his experience in urban transportation systems and policies to present a systematic review of transportation modes and their characteristics Transportation for Livable Cities dispels the myths and emotional advocacies for or against freeways rail transit bicycles and other modes of transportation The author discusses the consequences of excessive automobile dependence and shows that the most livable cities worldwide have intermodal systems that balance highway and public transit modes while providing for pedestrians bicyclists and paratransit Vuchic defines the policies necessary for achieving livable cities the effective implementation of integrated intermodal transportation systems

Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However

a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world s leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **ITF Round Tables Privatisation and Regulation of Urban Transit Systems** Transport Research Centre,International Transport Forum,Organisation for Economic Co-operation and Development,2008-11-05 Examines experience in integrating private management and capital with public transport policy objectives in a number of developed economies Influence of Service Planning Decision on Rail Transit Success Or Failure Jeffrey Richard Brown,2009 **Planning for diversity and multiplicity : a new agenda of the world planning community** ,2006 Abstract of the proceedings of the international conference presented in the 2006 World Planning Schools Congress that address a wide range of topics with an emphasis on urban planning and redevelopment **Sustainable Transportation Systems Engineering** Francis Vanek,Largus Angenent,James H. Machemehl,2007 **Public Transit Economics and Deregulation Policy** J. Berechman,1993-04-06 Drawing on transit experience from various countries and markets this book examines the economic environment of transit operations the cost and production properties of transit service supply and the policies and prospects of transit regulatory reform The principal objectives of the book are first to conduct theoretical and empirical analyses of the major factors which jointly determine the economic structure and conditions of the transit sector and second to explore and suggest policies which could resolve the sector s present crisis and make it economically viable The first objective is explored in Part One where major structural demand factors and regulatory and subsidy conditions are identified and examined Analytical and empirical measurement of technical production characteristics of transit services supply is carried out in Part Two Part Three focuses on transit regulatory reform policy issues The book is aimed primarily at an audience of transportation professionals including economists and planners as well as public policy analysts It requires in general a sound background in economics mainly microeconomics Thus graduate students in economics geography urban planning and public policy and advanced undergraduates with good training in economics can best benefit from this book **Public Transportation Planning** National Research Council (U.S.).
