This open access book highlights Singapore's development into a city in which water and greenery along with associated environmental technical social and political aspects have been harnessed and cultivated into a liveable sustainable way of life. It is also a story about a unique and thoroughgoing approach to large scale and potentially transferable water sustainability within largely urbanized circumstances which can be achieved along with complementary roles of environmental conservation ecology public open space management and the greening of buildings together with infrastructural improvements.

**Urban Water Demand Management** Corinne Ong, Cecilia Tortajada, Ojasvee Arora, 2023-05-13 This open access book highlights knowledge and expertise in Urban Water Demand Management (WDM) in ASEAN through comprehensive literature review and analysis as well as stakeholder consultations. It documents urban WDM policies, initiatives and practices that have demonstrated effective implementation outcomes across various contexts and which are expected to be relevant for cities in ASEAN. A WDM typology developed for this book identifies four key WDM measures: namely water losses, economic instruments, non-price mechanisms and alternative water reuse systems in the ASEAN context. Case illustrations of their effective implementation in different ASEAN cities are also included.

*The Active, Beautiful, Clean Waters Programme*, 2017. It documents the development of the Active Beautiful Clean Waters Programme and illustrates the potential of Singapore's blue spaces as environmental assets to enhance the liveability of urban environments.

**Mobilities and Foucault** Katharina Manderscheid, Tim Schwanen, David Tyfield, 2017-10-02 Although Foucault's work has been employed and embraced enthusiastically by some mobilities scholars, discussion across these two traditions to date has mostly been partial and unsystematic. Yet Foucault's work can make critical contributions, for example, to thinking about governing mobilities in contemporary societies while conversely mobilities research opens up new perspectives on Foucault. In combination, these bodies of work can illuminate issues as diverse as the greater interdependencies between mobility systems (e.g. transport, tourism, trade, internet use), the proliferation of the undesired mobilities of viruses, of natural phenomena like fire, of what is taken to be criminality and other seemingly inevitable by-products of globalisation, the perceived threats to desirable forms of mobility as constituted by climate change, peak oil and energy security and terrorism and warfare and the increased popularity of logics of governance premised on choice, responsabilisation and the re-coding of phenomena in economic terms under neo-liberalism. Against this background, this book brings together the first major collection of contributions from across the social sciences with a shared interest in both mobilities and Foucauldian thinking. This book was published as a special issue of *Mobilities*.

**Irrigation Theory And Practice - 2Nd Edn** A. M. Michael, 2009-11 It is a comprehensive treatise on Water Resources Development and Irrigation Management. For the last 30 years, the book has enjoyed the status of a definitive textbook on the subject. It has now been thoroughly revised and updated and thus substantially enlarged. In addition to the wholesale revision of the existing chapters, three new chapters have been added to the book: namely, Lift Irrigation Systems and their Design, Water Requirement of Crops and Irrigation Management and

Economic Evaluation of Irrigation Projects and Water Pricing Policy      **Water and Public Policy in India** Deepti Acharya, 2021-09-16 This book explores the conceptual and theoretical frameworks of Right to Water and analyzes its values in the context of water policy frameworks of the union governments in India. It uses a qualitative approach and combines critical hermeneutics with critical content analysis to introduce a new water policy framework. The volume maps the complex argumentative narrations which have emerged and evolved in the idea of Right to Water and traces the various contours and the nature of water policy texts in independent India. The book argues that the idea of Right to Water has emerged, evolved and is being argued through theoretical arguments and is shaped with the help of institutional arrangements developed at the international, regional and national levels. Finally, the book underlines that India's national water policies drafted respectively in 1987, 2002 and 2012 are ideal but are not embracing the values and elements of Right to Water. The volume will be of critical importance to scholars and researchers of public policy environment, especially water policy law and South Asian studies.

**Natural Resources Conservation Law** Sairam Bhat, 2010-11-10 This book presents a critical analysis of India's environment pollution and protection scenario following the State Pressure Response framework to analyze the parameters of conservation. It advocates that the role of environmental law should not be restricted to mere prevention and control of pollution but should encompass conservation and regeneration of natural resources too. The book also reflects on India's management policy regarding resource conservation and highlights the international laws on arbitration in environmental matters. It is a one-stop reference for all debates and discussions on environment with a global perspective.

Water Resources, Conservation and Management S.N. Chatterjee, 2008 In Indian context      **Urban Water Supply and Governance in India** Satyapriya Rout, Ruth Kattumuri, 2022-05-15 This book investigates institutional dimensions of urban water supply in India with a specific focus on institutional capabilities to provide drinking water to urban households in an efficient, equitable and sustainable manner. This book has been developed through empirical research within the context of growing urbanisation and increasing water needs of Indian cities and the wider developmental goal of achieving universal and equitable access to safe and affordable water for all as envisaged in goal 6 of the SDGs. This study revolves around three important aspects of urban water supply and governance. Firstly, it attempts to understand household water service delivery scenarios in urban India drawing from case studies based on our household survey in four cities: Ahmedabad, Bangalore, Kochi and Hyderabad. Secondly, it examines the question of existing socio-economic inequality and access to water in an urban context in India. While dealing with the issue of inequality and access to water, it attempts to explore the question of whether access to water and water scarcity is socially neutral whilst also analysing the mechanisms employed by the urban poor to manage their daily water needs. Thirdly, this book explores the role of institutions for efficient and effective delivery of water in urban India. The institutional analysis from a comparative perspective provides important insights to guide current reforms in domestic water supply in India, especially in a neo-liberal context. The book is a valuable resource for academicians, policy

makers and practitioners involved in water governance in general and domestic drinking water supply in particular Besides it is of great interest to those working in the area of urban development urban planning and household water management The book is an outcome of a collaborative research project by the authors sponsored jointly by University Grants Commission UGC New Delhi and UK India Education and Research Initiative UKIERI

*Sustainable Land Management in India* Gaurav Mishra, Krishna Giri, Sanjay Singh, Manoj Kumar, 2024-10-12 This edited book addresses various aspects of sustainable land management including existing policy norms and indigenous knowledge It focuses on how sustainable land management can combat desertification increase livelihood opportunities mitigate poverty and hunger and conserve biodiversity The book explores different sustainable land management practices and policy frameworks in India aimed at achieving land degradation neutrality Sustainable land management SLM encompasses Nature based Solutions for restoring degraded landscapes mitigating and adapting to climate change ensuring water and food security alleviating poverty promoting economic growth and conserving biodiversity This book is suitable for academicians researchers and policymakers involved in developing roadmaps and policies to achieve the 2030 Agenda for Sustainable Development

Water Crisis in India Ed. K.R. Gupta, 2008 Water is a prime natural resource and a basic necessity for sustaining life on earth Supplying adequate amount of potable water to the global population is a gigantic task in the wake of growing industrial and domestic needs The threat of climate change and global warming which has aggravated the problem of water shortage is of particular concern to India as we are largely dependent on glaciers and rainfall for water supply The United Nations World Water Development Report Water A Shared Responsibility emphasizes the need for good governance to meet the ever increasing demand for water The report asserts that mismanagement corruption lack of appropriate institutions bureaucratic inertia and paucity of investment in human and physical sources mar water management today The situation calls for right policy decisions and adoption of sustainable practices The problem is acute in India because of its high population density space and time variability of rainfall and

increasing depletion and contamination of its surface and groundwater resources Most water resources in India are contaminated by sewage and agricultural run off Besides overuse of pesticides and chemicals in agriculture is the primary cause of groundwater pollution in India Further uneven water distribution across the country is another aspect of water problem A large area of the country is water deficit whereas a small part is bestowed with abundance of water This has led to inter state conflicts The present anthology contains well researched articles by eminent scholars who have deeply analysed the problem and its various implications Major factors responsible for the problem have been studied in detail and some measures have been suggested to retrieve the situation The book will serve as a reference source for students researchers and policymakers and all those concerned with an ensured supply of water across the country 219 Mr. Rohit
