Chapter – 12

Q.1: Repulsion is the sure test of electrification. Explain?

Ans: Electrostatic attraction is observed between oppositely charged bodies and also between a charged (+ve or -ve) and an uncharged body. But, however, only two charges of the same kind (both +ve or both -ve) can repel each other. Hence, repulsion is the sure test of electrification.

Q.2: Will a solid metal sphere hold a large electric charge then a hollow sphere of the same diameter? Where the charge does resides in each case?

Ans: A solid metal sphere will hold the same amount of charge as is held by a hollow sphere of the same diameter. This is due to the fact that any excess electric charge resides only on the outer surface of a conductor.

Q.3: Explain why is it so much easier to remove an electron from an atom of large atomic mass than it is to remove a proton?

Ans: In an atom of large atomic mass, the number of both protons and electrons is large. This big atom contains many orbits (or shells). So it is easier to remove an electron from its outermost orbit. The heavy positive nucleus exerts weaker coulomb attraction force on it as compared to an electron in the innermost shell (e.g. K shell). However, protons are in the nucleuses which are held very strongly by strong nuclear forces.

Q.4: Why is it not correct to say that potential-difference is the work done in moving a unit positive charge between the points concerned?

Ans: The potential difference is the increase in electric potential energy (or work) per unit charge. So, if a small positive charge (q_0) is moved against the electric field between the two points, then the work divided by the amount of charge (w/q_0) gives the p.d.

Q.5: Why is it logical say that the potential of an earth connected object is zero? What can be said about the charge on the earth?

Ans: Practically, the earth is taken to be at zero potential. If a charged body is connected to the earth by a conductor, electron flow takes place such that the charge of the body is neutralized.

The earth is a reason sly good conductor. It is a huge neutral body. It is considered as an Infinite sink to which electrons can easily migrate without changing its potential

Q.6: Can an electric potential exist at n point in a region where the field is zero? Can the potential be zero at a place where the electric field intensity is not zero? Give example to illustrate your reasoning.

Ans: Yes, Electric potential can exist where the electric intensity is zero. The electric charge resides on the outer surface of a hollow sphere. At all points inside the sphere, the electric field intensity is zero. Otherwise the field lines would link the charges of opposite sign in

Electrolytes Georgii Georgievich Aseyev,2014-11-24 Electrolyte solutions play a key role in traditional chemical industry processes as well as other sciences such as hydrometallurgy geochemistry and crystal chemistry Knowledge of electrolyte solutions is also key in oil and gas exploration and production as well as many other environmental engineering endeavors Until recently a gap existed between the electrolyte solution theory dedicated to diluted solutions and the theory practice and technology involving concentrated solutions Electrolytes Supramolecular Interactions and Non Equilibrium Phenomena in Concentrated Solutions addresses concentrated electrolyte solutions and the theory of structure formation super and supramolecular interactions and other physical processes with these solutions now feasible due to new precision measurement techniques and experimental data that have become available The first part of the book covers the electrolyte solution in its stationary state electrostatic and

various ion dipole dipole dipole and mutual repulsion interactions The second part covers the electrolyte solution in its nonstationary status in the case of forced movement between two plates electrical conductivity viscosity and diffusion This theoretical framework allows for the determination of activity coefficients of concentrated electrolyte solutions which play a key role in many aspects of electrochemistry and for developing novel advanced processes in inorganic chemical plants

Fusion of Biological Membranes and Related Problems Herwig J. Hilderson, Stephen Fuller, 2005-11-19 Membrane fusion and targeting processes are tightly regulated and coordinated Dozens of proteins originating from both the cytoplasm and membranes are involved The discovery of homologous proteins from yeast to neurons validates a unified view Although much is known about the interfering proteins the events occurring when two lipid bilayers actually fuse are less clear It should be remembered that lipid bilayers behave like soap bubbles fusing when meeting each other In this respect interfering proteins should be considered as preventing undesirable and unnecessary fusion and eventually directing the biological membrane fusion process when where how and overcoming the activation energy In this latest volume in the renowned Subcellular Biochemistry series some aspects of fusion of biological membranes as well as related problems are presented Although not complete there is a lot of recent information including on virus induced membrane fusion The contributors of the chapters are all among the researchers who performed many of the pioneering studies in the field *Problems and Puzzles in Electric Fields* Tadasu Takuma, Takatoshi Shindo, 2020-03-23 This book aims at making readers develop a better understanding of electrostatic fields using the form of problems and puzzles summarized as questions hereafter and answers instead of tedious explanations in ordinary textbooks The book is filled with the questions with unexpected answers and questions often misunderstood or rarely completely understood most of which are original The questions in the book look simple and very easy to answer at a glance nevertheless once students try to solve them they will find that the questions are really tough nuts to crack Teachers can also use the questions in the book in their classes Not only from an academic or an educational point of view the book is useful also to engineers working in such fields as electrical discharges and their applications high voltage equipment in DC and AC circuits as well as electrostatic devices This is because the book introduces various practical applications related to electrostatic fields The original ideas of the book are based on the following Japanese book written by one of author T Takuma Panorama of Electric Fields in Japanese IEE Japan 2003 This English version of the book has been thoroughly revised and improved with several new questions added **Programme and The Book of Abstracts / Twelfth Annual Conference YUCOMAT 2010** Dragan Uskoković, 2010-08-01 The First Conference on materials science and engineering including physics physical chemistry condensed matter chemistry and technology in general was held in September 1995 in Herceg Novi An initiative to establish Yugoslav Materials Research Society was born at the conference and similar to other MR societies in the world the programme was made and objectives determined The Yugoslav Materials Research Society Yu MRS a nongovernment and non profit scientific association was founded in 1997 to promote multidisciplinary goal oriented research in materials science and engineering The main task and objective of the Society has been to encourage creativity in materials research and engineering to reach a harmonic coordination between achievements in this field in our country and analogous activities in the world with an aim to include our country into global international
