Practical Applications of Medical Geology Malcolm Siegel, Olle Selinus, Robert Finkelman, 2021-08-01 This edited volume provides a framework for integrating methods and information drawn from geological and medical sciences and provides case studies in medical geology to illustrate the usefulness of this framework for crafting environmental and public health policies related to natural materials. The relevance of medical geology research to policy decisions is a topic rarely discussed and this volume attempts to be a unique source for researchers and policy makers in the field of medical geology in addressing this gap in practical medical geology applications. The book's four sections establish this framework in detail using risk assessment case studies, data analyses, and specific medical geology techniques. Following an introduction to medical geology in the context of risk assessment and risk management, the second section discusses specific methods used in medical geology in the categories of geoscience, biomedicine, and data sources. The third section discusses the medical geology of natural materials, energy use, and environmental and workplace impacts. This section includes specific case studies in medical geology and describes how the methods and data from the previous section are used in a medical geology analysis. The fourth section includes a guide to the medical geology literature and provides some examples of medical geology programs in Asia and Africa.

Advanced Two-Dimensional Nanomaterials for Environmental and Sensing Applications Peter R. Makgwane, Naveen Kumar, David E. Motaung, 2024-12-24 Advanced Two Dimensional Nanomaterials for Environmental and Sensing Applications provides state of the art progress developments in the design strategies of 2D based nanomaterials. It covers specific focused applications in respective environmental challenges posed by pollutants such as chemical gases, bacterial and microbial, textile dyes, pharmaceutical antibiotics, agricultural pesticides, and toxic heavy metals in water and air contaminations. It elaborates the applications of 2D nanomaterials in the context of technologies such as sensing and detection to monitor pollutants as well as photocatalysis and adsorption for the removal of pollutants. Features: Elaborates the applications of 2D nanomaterials in the context of sensing and detection to monitor pollutants as well as photocatalysis and adsorption for the removal of pollutants. Focuses on environmental pollutants detection, removal, or remediation, and monitoring device fabrications. Discusses materials of specific dimension 2D. Covers both water and air remediation. Includes photocatalytic degradations and antimicrobial disinfection. This book is aimed at graduate students and researchers in chemical and civil engineering, materials science, and nanomaterials.

Current Topics in the Utilization of Clay in Industrial and Medical Applications Mansoor Zoveidavianpoor, 2018 Clay and clay minerals have always been used since the ancient times for making ceramic materials and also as a building material. Over the past decades, there has been a growing trend in their applicability in different areas such as industries, environmental remediation, and water treatment sectors. The growing trend is mainly associated with the fact that they are chemically and mechanically stable, have higher specific surface area, and cation exchange capacity. Furthermore, clays can be modified to improve their functionalities in

different sectors In this chapter we present a review of the structural mineralogical and chemical properties of clay and the effect of surface modification in their structures We further looked at their applicability in arsenic and fluoride removal in their raw and also in their modified form Although the literature showed that modified clay minerals yields higher adsorption capacity as compared to raw clays little nothing has been reported yet in relation to the cost of modifying clays with chemical species As such new studies should also elaborate on the cost effectiveness of modifying clay minerals with chemical species
