

The book cover features a stylized illustration. At the top, a large, vibrant sun with orange and yellow rays is partially obscured by a pink, cloud-like shape. Below the sun, a large, olive-green oval contains the title and author's name. The background of the cover is a mix of yellow and orange. In the foreground, two dark-skinned arms wearing blue work gloves are shown, with the hands positioned as if they are about to grasp or hold something. The overall style is graphic and modern.

Untapped The Scramble For Africas Oil:

Untapped John Ghazvinian, 2009-09 Africa a region long known to be rich in oil is the scene of a competition between major powers that recalls the 19th century scramble for colonization there But what does this new oil boom mean for America for the world for Africans themselves To find out John Ghazvinian traveled through twelve African countries from Sudan to Congo to Angola talking to warlords industry executives bandits activists priests missionaries oil rig workers scientists and ordinary people whose lives have been transformed by the riches beneath their feet The result is a high octane narrative that reveals the reasons for despair and reasons for hope emerging from the world s newest energy hot spot

Handbook of Oil Politics Robert E. Looney, 2012-01-25 These days one would have a difficult time picking up a newspaper or watching a newscast that did not have a lead story dealing with some aspect of oil From instability in the Middle East to stock market crashes and concerns over the health of the world economy to wars that seem to break out unexpectedly around the world to discussions of global warming and even speculation over the fate of mankind oil is usually lurking somewhere in the background To many oil markets and their linkages to a whole spectrum of events remain something of a mystery Unfortunately most of the easily obtained information on oil is deeply flawed Whole web conspiracy sites depict ruthless insiders and reckless dictators manipulating energy markets at will The 30 essays in this volume written by the leading experts in the field attempt to set the record straight While their assessments may lack the sensationalism of many popular pundits serious readers will find their insights invaluable in the years to come in providing a framework for understanding many of the events of the day The volume is divided into sections Part I provides a broad overview of the political dimensions underlying the supply of oil Some of the key questions addressed include is the world running out of oil And if so is the cause physical scarcity or political policy failure Why are many of the oil producing countries in the developing world so unstable Can oil markets be made to provide more stability to the world system Part II examines some of the political responses to oil related developments Here the key questions concern the role of the political process in the development of alternative sources of energy The various means through which countries approach their energy security is assessed as is the problem of climate change The section ends with the provocative question do governments really need to go to war for oil Oil production energy markets and the political environment produce distinct regional patterns Part III examines oil and political power in Africa Latin America the Middle East and South East Asia Part IV expands some of the main regional themes through a series of case studies on specific countries Iraq Iran Saudi Arabia Egypt Russia and Brazil A final section looks to the future will the oil curse continue for many countries How will the growth and expansion of China affect oil prices and availabilities Will oil based sovereign wealth funds contribute to global stability or will they create increased political tensions between consuming and producing countries Will volatile oil markets undermine the US dollar as well as the global financial system Perhaps appropriately the volume ends with an assessment of the future of oil in a carbon

constrained world All in all the essays in this volume cover the whole spectrum of the politics of oil Hopefully they will help shed light on this vital yet still often misunderstood topic The book does not represent any particular political or ideological position Instead each author has sought to objectively seek a deeper understanding as to the complexity and subtlety of forces that have all too often eluded policymakers around the world **The New Scramble for Africa** Padraig R.

Carmody,2013-04-26 Once marginalized in the world economy the past decade has seen Africa emerge as a major global supplier of crucial raw materials like oil uranium and coltan With its share of world trade and investment now rising and the availability of natural resources falling the continent finds itself at the centre of a battle to gain access to and control of its valuable natural assets China's role in Africa has loomed particularly large in recent years but there is now a new scramble taking place involving a wider range of established and emerging economic powers from the EU and US to Japan Brazil and Russia This book explores the nature of resource and market competition in Africa and the strategies adopted by the different actors involved be they world powers or small companies Focusing on key commodities the book examines the dynamics of the new scramble and the impact of current investment and competition on people the environment and political and economic development on the continent New theories particularly the idea of Chinese hegemony are developed to explain how resources and markets are accessed While resource access is often the primary motive for increased engagement the continent also offers a growing market for low priced goods from Asia and Asian owned companies Individual chapters explore old and new economic power interests in Africa oil minerals timber biofuels food and fisheries and the nature and impacts of Asian investment in manufacturing and other sectors The New Scramble for Africa will be essential reading for students of African studies international relations and resource politics as well as anyone interested in current affairs Extracting Profit Lee Wengraf,2018-02-19

Extracting profit explains why Africa in the first decade and a half of the twenty first century has undergone an economic boom This period of Africa rising did not lead to the creation of jobs but has instead fueled the growth of the extraction of natural resources and an increasingly wealthy African ruling class

Perspectives on Africa-China Infrastructural and Industrial Cooperation Bhaso Ndzendze,David Monyae,2023-10-19 This edited volume discusses infrastructural cooperation and industrial cooperation between China and several countries in Africa In contributions by academics and practitioners alike the book distils the conceptual implications of empirical and ethnographic findings and explores probable future developments in the Africa China relationship The chapters deal with numerous countries across the African continent covering nearly all regions showcasing the dynamics of China's relations with different countries while highlighting African agency over major infrastructure projects and industrial activity Providing an in depth look at the evolving economic cooperation across these two regions this volume will appeal to researchers and students of African politics international relations area studies and comparative politics The book will be of relevance to policymakers in governments international organizations and non governmental organizations involved in policy formulation

particularly regarding the Africa China relationship **The New York Times Index** ,2007 The Scramble for Africa's Oil Deekana Tipchanta,2012 This thesis analyses foreign intervention in oil rich African states which have contributed to the resource curse problem in the latter It concentrates on the role of former colonial powers France and Britain as well as new players the United States China and multinational agencies who have deployed policies and carried out practices in securing Africa s oil resources This study argues that Foreign intervention contributes to the likelihood of the resource curse through both political and economic means based mainly on the resource curse theory and concept of neo colonialism Apart from factors addressed by the existing literature on the resource curse namely economic malfunctions government policies social foundations resource types country size and initial conditions this research hypothesizes that foreign interventions display a strong linkage to the resource curse African countries have experienced poverty and conflicts even if they have had the greatest dosages of foreign interventions from the slave trade through to the present date as explained by neocolonialism This is contrast to the neo liberal economists which promote foreign interventions and resource exploitation which they argue are necessary for African economic and political development This study includes two theoretical approaches which address the relationship between continuing foreign intervention and the resource curse in Africa neo Marxism and realism Marxist dialectical materialism allows us to look back over the history of the relations between Africa and foreign powers both materially and in regard to how these relations time and again affect and shape Africa s structure By discussing the world order in terms of production structure that leads to exploitation oppression enslavement and the struggles of the lower social classes in weaker states Marxist perspectives shed light on the relationship between foreign interventions and Africa s underperformance With realist main assumptions of power and profits maximization this study explains that foreign interventions in African oil rich countries will be maintained and will intensify as global situations surrounding oil become more hostile I offer to use these theories to explain specific policies and practices of foreign interventions with relation to the African oil industries The foreign powers involved in the interventions for Africa s oil the mechanism through which they are carried out and the outcomes of these actions are neither addressed nor evaluated in these theories Although the abovementioned Marxist strands indicate that neo colonialism will contribute to poor performance in Africa it does not relate to the resource curse discussion which mainly assumes that resource rich countries are doomed to fail This is the gap which this study has filled by linking these theories to real world practices By applying the concept of neo colonialism this study compiles the empirical evidence of continuing interventions by former colonial powers and new powers as they seek oil security in African states The result of this study is that oil related foreign intervention is linked to the resource curse discussion In effect the resource curse theory is refined by stating that a foreign intervention variable must be included into its discussion and policy considerations This study records oil related incidents of foreign interventions in Africa and systematically categorizes oil related foreign interventions using political and economic

approaches Foreign political interventions include the balkanization of Africa the use of state policies political meddling and military involvement Economic approaches used by foreign players to secure African oil are categorized into two central themes financial involvement and business conduct The former refers to the following practices neo liberal policies petrodollar monetary order economic sanctions financial support and money corruption With regards to business conduct the following practices will be investigated circumventing environmental standards enclave oil operations and unsuitable philanthropic projects This study examines these interventions from the first scramble in Africa during the colonial era through to the second scramble during the Cold War and the current scramble of Africa s resources The study displays these occurrences in any oil rich African countries including Angola Sudan Libya Gabon and Equatorial Guinea A specific case study is devoted for Nigeria which is the biggest oil rich African countries but paradoxically experiences endemic poverty and conflicts Primary data and interviews conducted in the Niger Delta Lagos Cape Town and London are used extensively

What is Causing the Scramble for West African Oil and how Can the Emerging Gulf of Guinea Commission for a Collective Policy to Protect the Region's Interest? M. I. B. Hassan,2009 *Africa's New Oil* Celeste Hicks,2015-04-09 The development of Africa s oil has greatly accelerated in recent years with some countries looking at the prospect of almost unimaginable flows of money into their national budgets But the story of African oil has usually been associated with conflict corruption and disaster with older producers such as Nigeria having little to show for the many billions of dollars they ve earned In this eye opening book former BBC correspondent Celeste Hicks questions the inevitability of the so called resource curse revealing what the discovery of oil means for ordinary Africans and how China s involvement could mean a profound change in Africa s relationship with the West A much needed account of an issue that will likely transform the fortunes of a number of African countries for better or for worse *It's the Crude, Dude* Linda McQuaig,2004 Probes the mystery of what really lay behind the U S invasion of Iraq Even as Washington s rationales for war have been thoroughly discredited there s been a stunning silence about its real motives Any mention of oil is practically shouted down Breaking this virtual taboo Canadian journalist McQuaig explores Washington s desire to gain control over the largest untapped oil reserves on earth and establish a major military presence in the fantastically oil rich region even as dwindling worldwide reserves threaten to turn competition for crude into the major international battleground of the future Particularly taboo has been any suggestion of the involvement of Big Oil Yet for decades the giant oil companies have enjoyed the power to shape policy manipulate markets and even topple foreign governments In the process they ve reaped staggering profits now bigger than ever The quest for crude continues to determine events around the world From publisher description *Over a Barrel* Raymond J. Africa's Booming Oil and Natural Gas Exploration and Production David Edward Brown,2013 Two key long term energy trends are shifting the strategic balance between the United States and China the world s superpower rivals in the 21st century first a domestic boom in U S shale oil and gas is dramatically boosting America s energy security second the frenetic and successful search for hydrocarbons in Africa is making it an increasingly crucial element in China s energy diversification strategy America s increasing energy security and China s increased dependence on energy imports from Africa and the Middle East until well past 2040 despite its own shale discoveries will make Beijing s own increasing energy insecurity be felt even more acutely pushing the People s Liberation Army to accelerate adoption of a two ocean military strategy that includes an enduring presence in the Indian Ocean as well as the Pacific Ocean Hegemonic Rivalry Amanda R.
