Unthinking Thinking Jorge Luis Borges Mathematics And The New Physics:

Unthinking Thinking Floyd Merrell, 1991 This authoritative study explores the scientific and mathematical cultural milieu that patterns much of the Argentine writer Jorge Luis Borges's narrative design Although criticism of Borges's fiction and essays has long emphasized philosophical traditions Merrell expands the context of this interrogation of traditions by revealing how early twentieth century and contemporary mathematics and physics also participated in a similar exploration Topics treated include the semiotic flows of paradox and contradiction the patterns of infinities the limits of natural and mathematical languages and the narrative function in scientific theory Against this background Merrell provides incisive readings of Borges's complex fiction and essays

Fictional Worlds and Philosophical Reflection Garry Hagberg, 2022-01-31 This edited collection investigates the kinds of philosophical reflection we can undertake in the imaginative worlds of literature Opening with a look into the relations between philosophical thought and literary interpretation the volume proceeds through absorbing discussions of the ways we can see life through the lens of literature the relations between philosophical saying and literary showing and some ways we can see the literary past philosophically and assess its significance for the present Taken as a whole the volume shows how imagined contexts can be a source of knowledge a source of conceptual clarification and a source of insight and understanding And because philosophical thinking is undertaken after all in words a heightened sensitivity to the precise employments of our words particularly philosophically central words such as truth reality perception knowledge selfhood illusion understanding falsehood can bring a clarity and a refreshed sense of the life that our words take on in fully described contexts of usage And in these imagined contexts we can also see more acutely and deeply into the meaning of words about words metaphor and figurative tropes verbal coherence intelligibility implication sense and indeed the word meaning itself Moving from a philosophical issue into a literary world in which the central concepts of that issue are in play can thus enrich our comprehension of those concepts and in the strongest cases substantively change the way we see them With a combination of conceptual acuity and literary sensitivity this volume maps out some of the territory that philosophical reflection and literary engagement share

Semiosis in the Postmodern Age Floyd Merrell, 1995 Who are we to suppose we are capable of comprehending the world of which we are a part and what is the world to suppose it can be understood by us minuscule and insignificant spatiotemporal warps contained within it This provocative question opens Floyd Merrell's study of postmodernism and the thought of Charles Sanders Peirce part of the author's ongoing effort to understand our contemporary cultural and intellectual environment The specific focus in this interdisciplinary study is the modernism postmodernism dichotomy and Peirce's precocious realization that the world does not lend itself to the simplistic binarism of modernist thought In Merrell's examination of postmodern phenomena the reader is taken through various facets of the cognitive sciences philosophy of science mathematics and literary theory Merrell's consideration of Peirce's complex and inadequately understood concept of the sign is enhanced through numerous charts and

figures Theories hypotheses and speculation in the physical sciences are then brought to bear on Peircean semiotics The final chapter critiques the often indiscriminating acceptance of postmodern practices in today s academic world Literary Infinities Baylee Brits,2017-11-16 Today we have forgotten that mathematics was once aligned with the arts rather than with the sciences Literary Infinities analyses the connection between the late 19th century revolution in the mathematics of the infinite and the literature of 20th century modernism opening up a novel path of influence and inquiry in modernist literature Baylee Brits considers the role of numbers and the concept of the infinite in key modernists including James Joyce Italo Svevo Jorge Luis Borges Samuel Beckett and J M Coetzee She begins by recuperating the difficult and rebellious German mathematician Georg Cantor for the broader artistic cultural and philosophical project of modernism Cantor revolutionized the mathematics of the infinite creating reverberations across the numerical sciences philosophy religion and literary modernism This modernist infinity is shown to undergird and shape key innovations in narrative form creating a bridge between the mathematical and the literary presentation and representation formalism and the tactile imagination Jorge Luis Borges Alfonso de Toro,1999 **Latin American Textualities** Heather J.
