transportation planning in light of environmental sustainability and social equity It begins with a review of the Indian urban transportation system and the issues surrounding it and discusses the alternatives and policy directions that are being considered It examines all the environmental issues arising out of transportation as a sector and assesses the alternatives that can be considered to improve sustainability Further the book not only analyses transportation modes that cater to the travel needs of the poor so as to make them more socially equitable but also explores measures to promote them using a multi criteria and multi stakeholder approach It addresses the barriers that are bottlenecks for the implementation of cleaner fuels and modes of transport and presents an incremental approach to tackle environmental concerns including climate change when planning transportation in the long term Finally it presents the dilemma of city administrators in choosing between strategies aimed at local pollution control and those aimed at limiting global emissions This unique book provides a comprehensive overview of sustainable transportation It discusses all the important elements that are essential to transportation planners and policy makers when planning a city s transportation Theoretical presentations augmented by case specific research work and the methodology used in some of the modules make it a valuable resource for researchers working at the forefront of this area **Urban Transport in the Developing World** Harry T. Dimitriou, Ralph

Gakenheimer, 2011-01-01 Policy making for urban transport and planning of economies in the developing world present major challenges for countries facing rapid urbanisation and rampant motorisation alongside growing commitments to sustainability These challenges include coping with financial deficits providing for the poor dealing meaningfully with global warming and energy shortages addressing traffic congestion and related land use issues adopting green technologies and

adjusting equitably to the impacts of globalisation This book presents a contemporary analysis of these challenges and new workable responses to the urban transport problems they spawn The Geography of Urban Transportation, Fourth Edition Genevieve Giuliano, Susan Hanson, 2017-04-12 A comprehensive update the fourth edition of this leading text features numerous chapters by new authors addressing the latest trends and topics in the field The book presents the foundational concepts and methodological tools that readers need in order to engage with today's pressing urban transportation policy issues Coverage encompasses passenger and freight dynamics in the American metropolis the local and regional transportation planning process and questions related to public transit land use social equity and environmental justice energy consumption air pollution transportation finance sustainability and more Among the student friendly features are special topic boxes delving into key issues and 87 instructive figures including eight color plates New to This Edition Extensively revised coverage of information and communication technologies urban freight travel behaviors and regional transportation planning Engaging discussions of current topics smartphone travel tracking Uber car and bike sharing food deserts biofuels and more Heightened focus on climate change Reflects over a decade of policy changes technological advances and emergent ideas and findings in the field Most of the figures and special topic boxes are new **Urban Public Transport Systems Innovation in the Fourth Industrial Revolution Era** Trynos Gumbo, Thembani Moyo, Bongumusa Ndwandwe, Brightnes Risimati, Sipiwe Given Mbatha, 2022-04-02 This book explores the physical and electronic integration of innovative urban public transport systems in seven metropolitan cities in South Africa and Zimbabwe in the era of the Fourth Industrial Revolution Industry 4.0 The book also highlights how collaborative engagement can improve new transport projects in cities of the Global South It demonstrates how integration concerns remain in transport infrastructure projects in cities of the developing countries Consequently in order to strengthen the emerging and promising economies of these cities there is a need for efficient integrated reliable and affordable public transport systems The book explains that plans to deliver innovative transport systems in the Global South need to be well coordinated and managed to yield physically and electronically integrated systems *Environment and the City* Joe Ravetz, Clive George, Joe Howe, 2004-07-15 For the first time at the beginning of the twenty first century urban dwellers outnumber rural residents and this trend is set to continue Consequently one of the most pressing issues of our time is how to square the social and economic development of cities with their environmental limits and those of the wider environment The theme of the environment and city is topical at every level from the politics of global trade to local community networks Environment and the City looks at the evolution of cities in the developed and the developing world and the implications for resource consumption and environmental impacts It takes a cross cutting approach with new thinking on multiple geographies the configuration of networks exclusion consumption risk and ecological footprint Urban environmental themes and their related social economic and political agendas are outlined In turn the environmental impacts and environmental agendas relating to key sectors of the urban economy are discussed The

global context to such issues is then explored before the practical tools and methods of urban environmental management are investigated. The theme of the sustainable city emerges from this not so much as a standard menu but as a learning process between all sections of society. This book, a valuable resource, provides a concise accessible route map for all students interested in the environmental issues emanating from our urban society. Written to aid student understanding, the easily navigable text features boxed practical examples, discussion points, signposts to reading and websites, and a glossary.

Sustainability Matters (In 2 Volumes) Lin Heng Lye, Victor R Savage, Loke Ming Chou, Liya E Yu, Harn-wei Kua, 2014-04-29. Sustainability Matters is a compilation of some of the best research papers by students from the National University of Singapore's inter disciplinary graduate programme in environmental studies, the MSc in Environmental Management (MEM). This collection is for the period 2009-10 to 2011-12. As the period covers 3 academic years, the papers have been split into two volumes: Sustainability Matters Asia's Green Challenges and Sustainability Matters Asia's Energy Concerns, Green Policies and Environmental Advocacy. These two volumes are the third and fourth compilation by the programme and respectively comprise sixteen and fourteen of the best research papers completed during this period. The papers have been edited for brevity. These papers analyze the many challenges to effective environmental management in the context of different countries including India, Sri Lanka, Bangladesh, China, Hong Kong, Nepal, Singapore, and Thailand, and propose insightful solutions. The first compilation, Sustainability Matters: Environmental Management in Asia, was published in 2010 by World Scientific and comprised the best papers from 2001-2 to 2006-7. The second, Sustainability Matters: Challenges and Opportunities in Environmental Management in Asia, was published in 2011 by Pearson and comprised the best papers from 2007-8 to 2008-9.

An Introduction to Sustainable Transportation Preston L. Schiller, Jeffrey R.

Kenworthy, 2010-08-12. Transportation plays a substantial role in the modern world; it provides tremendous benefits to society but it also imposes significant economic, social, and environmental costs. Sustainable transport planning requires integrating environmental, social, and economic factors in order to develop optimal solutions to our many pressing issues, especially carbon emissions and climate change. This essential multi-authored work reflects a new sustainable transportation planning paradigm. It explores the concepts of sustainable development and sustainable transportation, describes practical techniques for comprehensive evaluation, provides tools for multi-modal transport planning, and presents innovative mobility management solutions to transportation problems. Students of various disciplines, planners, policymakers, and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing transportation towards greater sustainability. This text reflects a fundamental change in transportation decision making. It focuses on accessibility rather than mobility, emphasizes the need to expand the range of options and impacts considered in analysis, and provides practical tools to allow planners, policy makers, and the general public to determine the best solution to the transportation problems facing a community. The book starts by placing

transportation within the broader sustainability discussion emphasising a comprehensive approach to sustainability planning and introducing the notion of regenerative transportation In sections on policymaking and planning the book examines how decisions are currently and how they should be made explaining the complex and often misunderstood area of public participation The authors explain demand management as applied to transportation and present lessons from other public arenas and areas of application especially in urban suburban areas The text takes readers through each and every mode of transport beginning with human powered modes and ending in motorized modes including marine and air transport The modes are analyzed separately and in comparison with others according to several criteria Capacity utility functionality considerations infrastructure demands resource consumption land use considerations pollution and costs In ways that non technically trained readers as well as planning students professionals can find useful the book includes guidance on how to optimize transportation systems balancing economic social and environmental objectives while creating just robust and diverse rather than one size fits all solutions The modes are grouped and compared within their respective contexts and there is vital discussion and differentiation between passenger and freight goods transport The final section develops a comprehensive summary of the previous chapters and develops arguments for sustainable transportation policymaking and integrated planning providing international examples and case studies and extracting from them general applications for integrated sustainable transportation Featuring extensive international examples and case studies textboxes graphics recommended reading and end of chapter questions the authors draw on considerable teaching and researching experience to present an essential ground breaking and authoritative text on sustainable transport
