Wolfgang Schärtl, 2007-08-13 Light scattering is a very powerful method to characterize the structure of polymers and nanoparticles in solution Recent technical developments have strongly enhanced the possible applications of this technique overcoming previous limitations like sample turbidity or insufficient experimental time scales However despite their importance these new developments have not yet been presented in a comprehensive form In addition and maybe even more important to the broad audience there lacks a simple to read textbook for students and non experts interested in the basic principles and fundamental techniques of light scattering As part of the Springer Laboratory series this book tries not only to provide such a simple to read and illustrative textbook about the seemingly very complicated topic of light scattering from polymers and nanoparticles in dilute solution but also intends to cover some of the newest technical developments in experimental light scattering **Frontiers in Materials Physics, Vol. 1 , Two-dimensional X-ray Diffraction** Bob B.

Ion Correlations at Electrified Soft Matter Interfaces

Nouamane Laanait, 2013-07-30 Ion Correlations at Electrified Soft Matter Interfaces presents an investigation that combines experiments theory and computer simulations to demonstrate that the interdependency between ion correlations and other ion interactions in solution can explain the distribution of ions near an electrified liquid liquid interface The properties of this interface are exploited to vary the coupling strength of ion ion correlations from weak to strong while monitoring their influence on ion distributions at the nanometer scale with X ray reflectivity and on the macroscopic scale with interfacial tension measurements This thesis demonstrates that a parameter free density functional theory that includes ion ion correlations and ion solvent interactions is in agreement with the data over the entire range of experimentally tunable correlation coupling strengths The reported findings represent a significant advance towards understanding the nature and role of ion correlations in charged soft matter Ion distributions underlie many scientific phenomena and technological applications including electrostatic interactions between charged biomolecules and the efficiency of energy storage devices These distributions are determined by interactions dictated by the chemical properties of the ions and their environment as well as the long range nature of the electrostatic force The presence of strong correlations between ions is responsible for counterintuitive effects such as like charge attraction

Nanostructured Soft Matter A.V. Zvelindovsky, 2007-11-06 The scientist does not study nature because it is useful he studies it because he delights in it and he delights in it because it is beautiful If nature were not beautiful it would not be worth knowing and if nature were not worth knowing life would not be worth living Henri Poincar e 1854 1912 The ancient Greeks quite ingeniously realised that all materials and their now known as macroscopic properties including life itself are due to a limited number of tiny constantly moving building blocks and the conn tions now called interactions between these blocks Receiving both scienti c and non scienti c opposition the idea faded and despite some renaissance of atomistic ideas in the 17 19th centuries it still took more than two thousand years until the time of Einstein for the idea of microscopic building

blocks to be fully accepted These ideas begun during the golden age of physics in the 20th century have led to a comprehensive understanding of such states of matter as gases and solids which in turn have completely revolutionised everyday life in the developed world by introducing technological wonders such as modern cars, aircraft, semiconductor chips for computers and nuclear power Another state of matter which appeared to be much more difficult to tackle even in the case of simple liquids like liquid argon, a research favourite in the field, Legend tells that Lev D
