the various methods of analyzing the motions of mechanisms Part II goes into the engineering problems involving the selection specification design and sizing of mechanisms to accomplish specific motion objectives Part III covers the consequences of the proposed mechanism design In other words having designed a machine by selecting specifying and sizing the various mechanisms which make up the machine we tackle such questions as What happens during the operation of the machine What forces are produced Are there any unexpected operating results Will the proposed design be satisfactory in all respects **Bulletin of the Institution of Engineers (India)**.
