Theory and Applications of Satisfiability Testing Fahiem Bacchus, Toby Walsh, 2005-06-02 The 8th International Conference on Theory and Applications of Satisfiability Testing SAT2005 provided an international forum for the most recent research on the satisfiability problem SAT SAT is the classic problem of determining whether or not a propositional formula has a satisfying truth assignment It was the first problem shown by Cook to be NP complete Despite its seemingly specialized nature satisfiability testing has proved to be extremely useful in a wide range of different disciplines both from a practical as well as from a theoretical point of view For example work on SAT continues to provide insight into various fundamental problems in computation and SAT solving technology has advanced to the point where it has become the most effective way of solving a number of practical problems The SAT series of conferences are multidisciplinary conferences intended to bring together researchers from various disciplines who are interested in SAT Topics of interest include but are not limited to proof systems and proof complexity search algorithms and heuristics analysis of algorithms theories beyond the propositional hard instances and random formulae problem encodings industrial applications solvers and other tools This volume contains the papers accepted for presentation at SAT 2005 The conference attracted a record number of 73 submissions Of these 26 papers were accepted for presentation in the technical programme In addition 16 papers were accepted as shorter papers and were presented as posters during the technical programme

Theory and Applications of Satisfiability Testing - SAT 2008 Hans Kleine Büning, Xishun Zhao, 2008-05-07 This volume contains the papers presented at the 11th International Conference on Theory and Applications of Satisfiability Testing SAT 2008. The series of International Conferences on Theory and Applications of Satisfiability Testing SAT has evolved from a first workshop on SAT in 1996 to an annual international conference which is a platform for researchers studying various aspects of the propositional satisfiability problem and its applications. In the past the SAT conference venue alternated between Europe and North America. For the first time the conference venue was in Asia, more precisely at the Zhudao Guest House near Sun Yat Sen University in Guangzhou P R China. Many hard combinatorial problems can be encoded into SAT. Therefore, improvements on heuristics on the practical side as well as theoretical insights into SAT apply to a large range of real world problems. More specifically, many important practical verification problems can be rephrased as SAT problems. This applies to verification problems in hardware and software. Thus SAT is becoming one of the most important core technologies to verify secure

and dependable systems The topics of the conference span practical and theoretical research on SAT and its applications and include but are not limited to proof systems proof complexity search algorithms heuristics analysis of algorithms hard instances randomized formulae problem encodings industrial applications solvers spli ers tools case studies and empirical results SAT is interpreted in a rather broad sense besides propositional satis ability it includes for example the main of quanti ed Boolean formulae QBF and satis ability modulo theories SMT
