Biothermodynamics J. T. Edsall, H. Gutfreund, 1983-04-29 Discusses the history and biological processes of thermodynamics The first half of the book covers theoretical aspects of thermodynamic principles which will aid in understanding biochemical processes Later chapters deal with the interpretation of data obtained from biochemical reactions ligand binding and calorimetric measurements on biological systems **Experimental Thermodynamics Volume X** Dick Bedeaux, Signe Kjelstrup, Jan Sengers, 2015-10-14 The book covers recent developments in the theory of non equilibrium thermodynamics and its applications Four chapters are devoted to the foundations an overview chapter is followed by recent results addressing the underlying principles of the theory The applications are concerned with bulk systems with heterogeneous systems where interfaces are central and with process units in industry where entropy production minimization is useful There is also a collection of chapters under the heading mesoscopic non equilibrium thermodynamics giving in the end an overview of extensions of the theory into the non linear regime Bringing the literature up to date and detailing new approaches in this area of research it is aimed at a predominantly but not exclusively academic audience of practitioners of thermodynamics and energy conversion **Thermodynamics in Bioenergetics** Jean-Louis Burgot, 2019-08-30 *Thermodynamics in Bioenergetics* aims to supply students with the knowledge and understanding of the critical concepts and theories that are needed in the biochemistry and bioenergetics fields Biochemical reactions highlighting thermodynamics chemical kinetics and enzymes are addressed in the text Author Jean Louis Burgot guides the reader through the starting points strategy description and theory results to facilitate their comprehension of the theories and examples being discussed in the book Also discussed in the text are the notions of Gibbs energy entropy and exergonic and endergonic reactions
