The Ultimate Failure:

By His Own Rules: The Ambitions, Successes and Ultimate Failure of Donald Rumsfeld Bradley Graham, 2010-08
An epic examination of the life of one of the most confounding American political figures of the past half century Once considered among the best and brightest of his generation Donald Rumsfeld was exceptionally prepared by successful careers in politics and business to assume the Pentagon's top job in 2001 Yet six years later he left office as the most controversial Defense Secretary since Robert McNamara widely criticized for his management of the Iraq war and for his difficult relationships with Congress administration colleagues and military officers Was he really the arrogant errand boy controlling Pentagon leader frequently portrayed or as his supporters contend a brilliant hard charging visionary caught in a whirl of polarized Washington politics dysfunctional federal bureaucracy and bad luck Bradley Graham a longtime Washington Post reporter who closely covered Rumsfeld's challenging tenure at the Pentagon offers an insightful biography of a complex personality In the tradition of Karen De Young's *Soldier* and Bart Gellman's *Angler* *By His Own Rules* is a layered and revealing portrait of a man whose impact on U.S. national security affairs will long outlive him *Composites Engineering Handbook* P.K. Mallick, 1997-03-19 Offers information on the fundamental principles processes methods and procedures related to fibre reinforced composites The book presents a comparative view and provides design properties of polymeric metal ceramic and cement matrix composites It also gives current test methods joining techniques and design methodologies *Failure Criteria in Fibre Reinforced Polymer Composites* M. Hinton, 2004-08-31 Fiber reinforced polymer composites are an extremely broad and versatile class of material Their high strength coupled with lightweight leads to their use wherever structural efficiency is at a premium Applications can be found in aircraft process plants sporting goods and military equipment However they are heterogeneous in construction and anisotropic which makes making strength prediction extremely difficult especially compared to that of a metal This book brings together the results of a 12 year worldwide failure exercise encompassing 19 theories in a single volume Each contributor describes their own theory and employs it to solve 14 challenging problems The accuracy of predictions and the performance of the theories are assessed and recommendations made on the uses of the theories in engineering design All the necessary information is provided for the methodology to be readily employed for validating and benchmarking new theories as they emerge Brings together 19 failure theories with many application examples Compares the leading failure theories with one another and with experimental data Failure to apply these theories could result in potentially unsafe designs or over design *Comprehensive Nuclear Materials* Todd R Allen, Roger E Stoller, Shinsuke Yamanaka, 2011-05-12 Comprehensive Nuclear Materials Five Volume Set discusses the major classes of materials suitable for usage in nuclear fission fusion reactors and high power accelerators and for diverse functions in fuels cladding moderator and control materials structural functional and waste materials The work addresses the full panorama of contemporary international research in nuclear materials from Actinides

to Zirconium alloys from the worlds leading scientists and engineers Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environment Fully integrated with F elements net a proprietary database containing useful cross referenced property data on the lanthanides and actinides Details contemporary developments in numerical simulation modelling experimentation and computational analysis for effective implementation in labs and plants

Strength of Fibrous Composites Zheng-Ming Huang,Ye-Xin Zhou,2012-03-30 Strength of Fibrous Composites addresses evaluation of the strength of a fibrous composite by using its constituent material properties and its fiber architecture parameters Having gone through the book a reader is able to predict the progressive failure behavior and ultimate strength of a fibrous laminate subjected to an arbitrary load condition in terms of the constituent fiber and matrix properties as well as fiber geometric parameters The book is useful to researchers and engineers working on design and analysis for composite materials Dr Zheng Ming Huang is a professor at the School of Aerospace Engineering Applied Mechanics Tongji University China Mr Ye Xin Zhou is a PhD candidate at the Department of Mechanical Engineering the University of Hong Kong China
