EFFECT OF STRAIN RATE ON NANO FILLED

COMPOSITE MATERIALS Dr. SUJESH G, Ms. RINCHU P, 2023-10-13 Fiber reinforced polymer FRP composites have an important role in many industries because weight to strength ratio is extremely high when compared to monolithic metals. One of the main limitations of FRP composites are the low mechanical properties due to the presence of polymer associated with it. To solve this problem materials engineers are investigating the use of different nanoparticles mixed in different polymers to improve mechanical properties of the polymer. Here epoxy silica nano composites are tested as matrix face for Glass Fiber Reinforced Plastic using Vacuum bagging technique and autoclave technique and its improvement in mechanical properties such as tensile strength tensile modulus flexural strength are investigated. And also in this study behavior of nano filled glass fiber reinforced polymer under uniaxial tensile loading and transverse mid span loading are determined at different strain rates such as 5 50 500 mm/min. The tests were performed using Universal Testing Machine. Experimental result shows slight decrement in tensile properties and slight increment in flexural properties of the material by increasing the strain rates.

Reinforced Polymer Composites Pramendra K. Bajpai, Inderdeep Singh, 2019-08-20 Presents state of the art processing techniques and readily applicable knowledge on processing of polymer composites. The book presents the advancement in the field of reinforced polymer composites with emphasis on manufacturing techniques including processing of different reinforced polymer composites secondary processing of green composites and post life cycle processing. It discusses the advantages and limitations of each processing method and the effect of processing parameters on the overall performance of the composites. Characterization and applications of reinforced polymer composites are also introduced. Reinforced Polymer Composites Processing Characterization and Post Life Cycle Assessment starts off by providing readers with a comprehensive overview of the field. It then introduces them to the fabrication of both short fiber filler reinforced polymer composites and laminated reinforced polymer composites. Next it takes them through the processing of polymer based nanocomposites the many advances in curing methods of reinforced polymer composites and post life cycle processing re processing and disposal mechanisms of reinforced polymer composites. Numerous other chapters cover synthetic versus natural fiber reinforced plastics characterization techniques of reinforced plastics friction and wear analysis of reinforced plastics secondary processing of reinforced plastics and applications of reinforced plastics. Presents the latest development in materials processing and characterization techniques as well as applications of reinforced polymer composites. Guides users in choosing the best processing methods to produce polymer composites and successfully manufacture high quality products. Assists academics in sorting out basic research questions and helps those in industry manufacture products such as marine automotive aerospace and sport goods. Reinforced Polymer Composites Processing Characterization and Post Life Cycle Assessment is an important book for materials scientists polymer chemists chemical engineers process engineers and anyone involved in the chemical or plastics technology industry.
