The Territories Of Science And Religion:

The Territories of Science and Religion Peter Harrison, 2015-04-06 An extremely rewarding exploration of how these two great human endeavors can not only coexist but enrich each other Times Literary Supplement The conflict between science and religion seems indelible even eternal Surely two such divergent views of the universe have always been in fierce opposition Actually that's not the case says Peter Harrison Our very concepts of science and religion are relatively recent emerging only in the past three hundred years and it is those very categories rather than their underlying concepts that constrain our understanding of how the formal study of nature relates to the religious life In *The Territories of Science and Religion* Harrison dismantles what we think we know about the two categories then puts it all back together again in a provocative productive new way By tracing the history of these concepts for the first time in parallel he illuminates alternative boundaries and little known relations between them thereby making it possible for us to learn from their true history and see other possible ways that scientific study and the religious life might relate to influence and mutually enrich each other A tour de force by a distinguished scholar working at the height of his powers *The Territories of Science and Religion* promises to forever alter the way we think about these fundamental pillars of human life and experience An admirable contribution to the history of science and religion Publishers Weekly

The Landscapes of Science and Religion Nick Spencer, Hannah Waite, 2025-01-24 The relationship between science and religion has long been a heated debate and is becoming an ever more popular topic The scientific capacity to manipulate and change humans and their environment through genetic engineering life extension and AI is going to take a huge leap forward in the twenty first century provoking endless debates around humans playing God But what do we mean by this Asking this question is surprisingly hard work Attempts to essentialise science let alone religion quickly run into trouble Where are the boundaries Whose definition of science is definitive Which concept of religious is the authoritative one Ultimately neither science nor religion can be pinned down to one single meaning or definition Rather they encompass a family of definitions that relate to one another in a complex web of shifting ways Drawing on extensive research with over a hundred leading thinkers in the UK including Martin Rees Brian Cox Susan Greenfield A C Grayling Ray Tallis Linda Woodhead Steve Bruce Adam Rutherford Robin Dunbar Francesca Stavrakopoulou and Iain McGilchrist *The Landscapes of Science and Religion* takes the much needed step of asking what science and religion actually are before turning to the familiar question of how they relate to one another Building on this by paying particular attention to those who sense some form of conflict here Spencer and Waite explore where the perceived conflict really lies What exactly are people disagreeing about when they disagree about science and religion and what if anything can we do to improve that disagreement and bring about a fruitful dialogue between these two important human endeavours

The Territories of Human Reason Alister E. McGrath, 2019 *The Territories of Human Reason* is the first major study to explore the emergence of multiple situated rationalities It focuses on the relation of the

natural sciences and Christian theology but its approach can easily be extended to other disciplines Science, Religion, and the Protestant Tradition James C. Ungureanu, 2019-10-03 The story of the conflict thesis between science and religion the notion of perennial conflict or warfare between the two is part of our modern self understanding As the story goes John William Draper 1811 1882 and Andrew Dickson White 1832 1918 constructed dramatic narratives in the nineteenth century that cast religion as the relentless enemy of scientific progress And yet despite its resilience in popular culture historians today have largely debunked the conflict thesis Unravelling its origins James Ungureanu argues that Draper and White actually hoped their narratives would preserve religious belief For them science was ultimately a scapegoat for a much larger and more important argument dating back to the Protestant Reformation where one theological tradition was pitted against another a more progressive liberal and diffusive Christianity against a more traditional conservative and orthodox Christianity By the mid nineteenth century narratives of conflict between science and religion were largely deployed between contending theological schools of thought However these narratives were later appropriated by secularists freethinkers and atheists as weapons against all religion By revisiting its origins development and popularization Ungureanu ultimately reveals that the conflict thesis was just one of the many unintended consequences of the Protestant Reformation

Christian Faith in an Age of Science William North Rice, 1904 **The Poet of Science** William North Rice, 1919

The Territories of Human Reason Alister E. McGrath, 2018 The Territories of Human Reason explores the emergence of multiple situated rationalities It focuses on the relation of the natural sciences and Christian theology but its approach can easily be extended to other disciplines It provides a robust intellectual framework for discussion of transdisciplinarity which has become a major theme in many parts of the academic world McGrath offers a major reappraisal of what it means to be rational which will have significant impact on older discussions of this theme He sets out to explore the consequences of the seemingly inexorable move away from the notion of a single universal rationality towards a plurality of cultural and domain specific methodologies and rationalities This groundbreaking volume will provoke intense discussion and debate *The quarterly journal of science and annals of mining, metallurgy, engineering, industrial arts, manufactures, and technology*, 1876 Religion, Science, and Empire Peter Gottschalk, 2013 Peter Gottschalk offers a compelling study of how through the British implementation of scientific taxonomy in the subcontinent Britons and Indians identified an inherent divide between mutually antagonistic religious communities England's ascent to power coincided with the rise of empirical science as an authoritative way of knowing not only the natural world but the human one as well The British scientific passion for classification combined with the Christian impulse to differentiate people according to religion led to a designation of Indians as either Hindu or Muslim according to rigidly defined criteria that paralleled classification in botanical and zoological taxonomies Through an historical and ethnographic study of the north Indian village of Chainpur Gottschalk shows that the Britons presumed categories did not necessarily reflect the Indians concepts of their own identities though many Indians

came to embrace this scientism and gradually accepted the categories the British instituted through projects like the Census of India the Archaeological Survey of India and the India Museum Today s propogators of Hindu Muslim violence often cite scientific formulations of difference that descend directly from the categories introduced by imperial Britain Religion Science and Empire will be a valuable resource to anyone interested in the colonial and postcolonial history of religion in India **The Church and Science** Bertram Coghill Alan Windle,1917 The Golden Treasury of the History, Topography, Literature, Science, Art, and Religion of the Various Countries of the Globe James Hunter,1887 **The Union Seminary Review** ,1928 **Quarterly Journal of Science, and Annals of Mining, Metallurgy, Engineering, Industrial Arts, Manufactures, and Technology** ,1876 *Some New World* Peter Harrison,2024-04-18 In his famous argument against miracles David Hume gets to the heart of the modern problem of supernatural belief We are apt says Hume to imagine ourselves transported into some new world where the whole form of nature is disjointed and every element performs its operation in a different manner from what it does at present This encapsulates observes Peter Harrison the disjuncture between contemporary Western culture and medieval societies In the Middle Ages people saw the hand of God at work everywhere Indeed many suppose that belief in the supernatural is likewise fundamental nowadays to religious commitment But dichotomising between naturalism and supernaturalism is actually a relatively recent phenomenon just as the notion of belief emerged historically late In this masterful contribution to intellectual history the author overturns crucial misconceptions myths about secular modernity challenging common misunderstandings of the past even as he reinvigorates religious thinking in the present *Journal of Science* ,1876 **The American Journal of Science** ,1888 The American journal of science and arts **“The” Quarterly Journal of Science** ,1876 *The Popular Science Monthly* ,1893 **Special Report of Proceedings, Etc** ,1908 **Cultural Boundaries of Science** Thomas F. Gieryn,1999-01-15 This text argues that an explanation for the cultural authority of science lies where scientific claims leave laboratories and enter boardrooms and living rooms Here one uses maps to decide who to believe cultural maps demarcating science from pseudoscience ideology faith or nonsense
