economy it is expected to alleviate half a billion people from being rural villagers to urban residents in the coming decades. The great urbanization of the world's most populated country is sure to be one of the most remarkable social economic events in the 21st century. This book aims to give the reader a clear and comprehensive review of this unfolding event. It not only presents a historical review of the evolution of public policies and institutional reforms regarding urban development but also an up to date survey and in depth analysis of various social economic forces that define and contribute to the process of urbanization. The target audiences include students of modern China and professionals interested in China's urban development. The general public as well as scholars may also find the book informative and fascinating.

Scaling Urban Environmental Challenges Peter J. Marcotullio, 2012. Think globally act locally emphasizes the importance of scale in dealing with environmental challenges but not how to factor it in. This major new book focuses on the spatial dimensions of urban environmental burdens showing how important it is to take these into account when pursuing environmental justice and good governance whether in the context of the sanitary risks of slum living, the pollution of uncontrolled industrialization and motorization or the enormous ecological footprints of affluent urban lifestyles. Written by leading experts in the fields of urban development and environmental planning, the book reviews the urban environmental shifts that have shaped today's challenges and examines conditions and problems in the urban centres of low middle and high income countries. Case studies address such economically diverse cities as Accra, New Delhi, Mexico City and Manchester while thematic chapters explore issues including water sanitation and transportation. The book concludes by exploring and analysing different scales of governance. The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation nor depend only on global governance for global challenges such as greenhouse gas emissions but that scale is crucial in both understanding the problems and devising successful responses. Electric Vehicles Joao Vitor Fernandes Serra, 2013-03-01. Modern electric vehicles (EVs) are well suited to most people's general transport needs. Despite this, their adoption at a large scale has been grindingly slow. What are the reasons for this? Unlike most books which focus on the technical aspects of EV performance, this guide sets out the commercial and political barriers to their increased use and lays out the ways in which these barriers can be overcome. It begins by charting the rise of the internal combustion engine and detailing the problems associated with it which are driving efforts to electrify transportation. It goes on to introduce readers to the main EV technologies and examines the key issue of energy storage and recharging infrastructure. The remaining chapters explore the cost effectiveness of electric mobility, the differing adoption trajectories by which EVs may come to increase in prominence and the way in which policy can be tailored to encourage this rise. The book covers industrialized and emerging economy contexts, the latter of which have the greatest opportunities and most urgent need to take the EV development route. Requiring no specialist engineering knowledge to understand and written in an engaging accessible style, this is a valuable primer and resource for people in business, policy or study who are keen to understand

provides an overview of the spatial aspects of transportation and focuses on how the mobility of passengers and freight is linked with geography. The book is divided into ten chapters each covering a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation, and environmental impacts, and updated with the latest information available. The fifth edition offers new and updated material on information technologies and mobility, e-commerce, transport and the economy, mobility and society, supply chains, security, pandemics, energy, and the environment and climate change. With over 140 updated figures and maps, *The Geography of Transport Systems* presents transportation systems at different scales ranging from global to local. This volume is an essential resource for undergraduates studying transport geography as well as those interested in economic and urban geography, transport planning, and engineering. A companion web site which contains additional material such as photographs, maps, figures, and PowerPoint presentations has been developed for the book and can be found here: <https://transportgeography.org> **Changing Lanes** Joseph F.

DiMento, Cliff Ellis, 2013. The story of the evolution of the urban freeway, the competing visions that informed it, and the emerging alternatives for more sustainable urban transportation. Urban freeways often cut through the heart of a city, destroying neighborhoods, displacing residents, and reconfiguring street maps. These massive infrastructure projects, costing billions of dollars in transportation funds, have been shaped for the last half century by the ideas of highway engineers, urban planners, landscape architects, and architects, with highway engineers playing the leading role. In *Changing Lanes*, Joseph DiMento and Cliff Ellis describe the evolution of the urban freeway in the United States from its rural parkway precursors through the construction of the interstate highway system to emerging alternatives for more sustainable urban transportation. DiMento and Ellis describe controversies that arose over urban freeway construction, focusing on three cases: Syracuse, which early on embraced freeways through its center; Los Angeles, which rejected some routes and then built I 105, the most expensive urban road of its time; and Memphis, which blocked the construction of I 40 through its core. Finally, they consider the emerging urban highway removal movement and other innovative efforts by cities to re-envision urban transportation. *Handbook of Transportation and Public Policy* Anthony Perl, Rosalie Singerman Ray, Louise

Reardon, 2025-01-09. This cutting edge Handbook explores the many ways in which politics influences transportation policy, planning, and implementation, as well as the effects of transportation on political processes. It rigorously analyses the complex interrelation between administration, politics, and transportation, presenting theoretical and empirical insights into the governance approaches required to advance transportation's contribution to social and ecological wellbeing.

Infrastructure, Wellbeing and the Measurement of Happiness Hoda Mahmoudi, Jenny Roe, Kate Seaman, 2022-12-02. This book takes an interdisciplinary approach to our understanding of infrastructure and its influence on happiness and wellbeing, by examining the concept from economic, human development, architectural, urban planning, psychological, and ethical points of view. Providing insights from both research and practice, the volume discusses how to develop happier cities.

and improve urban infrastructure for the wellbeing of the whole population The book puts forth the argument that it is only in understanding the true nature of infrastructure's reach how it connects supports and enlivens human beings that we can truly begin to understand infrastructure's possibilities It connects infrastructure to that most elusive of human qualities happiness examining the way infrastructure is fundamentally tied to human values and human well being The book seeks to suggest novel approaches identify outmoded undertakings and define new possibilities in order to maximize infrastructure's impact for all people with a focus on diversity inclusion and equity In seeking to define infrastructure broadly and examine its possibilities systematically this book brings together theory and evidence from multiple disciplinary perspectives including sociology urban studies architecture economics and public health in order to advance a startling claim that our lives and the lives of others can be substantively improved by greater adhesion to the principles and practices of infrastructure design for happiness and wellbeing
