Think Like An Engineer Inside The Minds That Are Changing Our Lives:

Think Like an Engineer Guruprasad Madhavan, 2015 At last engineering is getting its due engineers are finally cool But few of us understand the engineering mindset It s the mindset that came up with flatpack furniture disposable nappies and the postal code that solved Stockholm s traffic and the problem of bank closing times the hole in the wall and whose seemingly simple ideas have saved countless lives with innovations such as painting a line behind traffic lanes and combining GPS with 999 The engineering mindset is much like a Swiss army knife multipurpose combining structured and abstract thinking common sense and great imagination and cross pollinating information from every possible sector With the help of a cast of star engineers and fascinating unexpected real world examples Madhavan offers a framework for you to think like the best engineers more creatively systematically and strategically so that you can learn to make better decisions in a complex world

Steps toward a Philosophy of Engineering Carl Mitcham, 2019-12-06 The rise of classic Euro American philosophy of technology in the 1950s originally emphasized the importance of technologies as material entities and their mediating influence within human experience Recent decades however have witnessed a subtle shift toward reflection on the activity from which these distinctly modern artifacts emerge and through which they are engaged and managed that is on engineering What is engineering What is the meaning of engineering How is engineering related to other aspects of human existence Such basic questions readily engage all major branches of philosophy ontology epistemology ethics political philosophy and aesthetics although not always to the same degree The historico philosophical and critical reflections collected here record a series of halting steps to think through engineering and the engineered way of life that we all increasingly live in what has been called the Anthropocene The aim is not to promote an ideology for engineering but to stimulate deeper reflection among engineers and non engineers alike about some basic challenges of our engineered and engineering lifeworld

within social networks can change the way we make decisions work with others and manage organizations How can you know when someone is bluffing Paying attention Genuinely interested The answer writes Alex Pentland in *Honest Signals* is that subtle patterns in how we interact with other people reveal our attitudes toward them These unconscious social signals are not just a back channel or a complement to our conscious language they form a separate communication network Biologically based honest signaling evolved from ancient primate signaling mechanisms offers an unmatched window into our intentions goals and values If we understand this ancient channel of communication Pentland claims we can accurately predict the outcomes of situations ranging from job interviews to first dates Pentland an MIT professor has used a specially designed digital sensor worn like an ID badge a sociometer to monitor and analyze the back and forth patterns of signaling among groups of people He and his researchers found that this second channel of communication revolving not around words but around social relations profoundly influences major decisions in our lives even though we are largely unaware of it Pentland presents the scientific background necessary for understanding this form of communication applies it to examples of group behavior in real organizations and shows how by reading our social networks we can become more successful at pitching an idea getting a job or closing a deal Using this network intelligence theory of social signaling Pentland describes how we can harness the intelligence of our social network to become better managers workers and communicators
