Humanize Thomas Heatherwick,2023-11-07 From one of the world s most innovative designers comes a fiercely passionate manifesto on why so many places have become miserable and boring and how we can make them better for everyone featuring hundreds of photographs and illustrations that will change how you see the world around you We are living through a global catastrophe Buildings affect how we feel moment by moment day by day They have the power to lift us up and make us feel awestruck playful safe and inspired just as they can make us feel alienated and sad But many of the places where we live work learn and heal have become monotonous and disposable We re surrounded by cheap boring buildings that make people stressed sick and unhappy In short much of our world has been crafted in a way that is hostile to human experience Now drawing on his experience of the last thirty years in making bold beautiful objects and buildings Thomas Heatherwick offers both an informed critique of the inhumanity in most of today s contemporary building design and a rousing call for action Looking through Heatherwick s eyes we see familiar landmarks and cityscapes around the world

from London Paris Barcelona Singapore New York Vancouver and beyond both old and new famous and obscure to learn how places can either sap the life out of us or nourish our senses and our psyche The time has come he says to put emotion back at the heart of the design process and the reasons to do so could not be more urgent Design is not superficial it has an impact upon economics climate change our mental and physical wellbeing even the peace and cohesion of our societies As citizens and users we need a world full of architectural diversity that delights and unites us And as makers and designers we can help create a world where cities reconnect with their essential mission to provide human spaces where people mix meet inspire each other and live out their full potential Elegantly crafted by Heatherwick's own studio and fully illustrated with hundreds of black and white photos *Humanize* is an urgent call to arms for making our world a better place for everyone to live and provides the vision and tools for us to make it a reality

Fabricating Plasticity in Aluminum Heather Roberge, 2025-03-05 This book argues for the value of the material prototype as a critical site of design innovation through a series of design and architectural case studies Illustrated by physical objects such as chairs columns and building facades these full scale material investigations reflect their designers' deep knowledge of material manufacturing and geometry The projects do not simply express how they are made rather their designers leverage the capacities of metal forming to exert distinctive influence on the object's expression and performance embracing manufacturing processes as instruments of material innovation Organized in two parts part one presents the material framework informing work by Arad Newson Heatherwick Future Systems Foster OMA Rex Hadid and others Seven metal forming techniques including Press Forming Press Brake Forming Spinning Panel Beating Casting

Extruding and Superplastic Forming are presented alongside work implemented with these processes Part two presents original design research Thermoformed aluminum facade systems ask critical questions of The Part Tessellation The Mold Tooling The Seam and the Finish Post Processing illustrating the potential of design inquiry when techniques of material production alter techniques of design Aluminum is redefined inheriting a plasticity which alters the intrinsic qualities of its raw production For students and professionals in the fields of industrial design and architecture this book presents an optimistic role for material in the design process The Architectural Model Matthew Mindrup, 2019-10-08 An investigation of different uses for the architectural model through history as sign souvenir funerary object didactic tool medium for design and architect's muse For more than five hundred years architects have employed three dimensional models as tools to test refine and illustrate their ideas But as Matthew Mindrup shows the uses of physical architectural models extend beyond mere representation An architectural model can also simulate instruct inspire and generate architectural designs It can be among other things sign souvenir toy funerary object didactic tool medium or muse In this book Mindrup surveys the history of architectural models by investigating their uses both theoretical and practical Tracing the architectural model's development from antiquity to the present Mindrup also offers an interpretive framework for understanding each of its applications in the context of time and place He first examines models meant to portray extant fantastic or proposed structures describing their use in ancient funerary or dedicatory practices in which models are endowed with magical power as a medium for architectural reverie and inspiration and as prototypes for twentieth century experimental designs Mindrup then considers models that exemplify certain architectural uses exploring the influence of Leon Battista Alberti's dictum that models be simple lest they distract from the architect's ideas analyzing the model as a generative tool and investigating allegorical analogical and anagogical interpretations of models Mindrup's histories show how the model can be a surrogate for the architectural structure itself or for the experience of its formal tactile and sensory complexity and beyond that that the manipulation play experimentation and dreaming enabled by models allow us to imagine architecture in new ways

Projects: A Very Short Introduction Andrew Davies, 2017-10-19 What is a project How are projects organized to deal with a complex rapidly changing and uncertain world Why are projects the organization of the future A project is a temporary organization and one time process established to achieve a desired outcome Projects range in size from small teams to large international joint ventures and temporary coalitions of public and private organizations What distinguishes projects from all other organizational activities such as mass produced products and services is that a project is finite in duration lasting from hours days or weeks to years and in some cases decades Each project is disposable It brings together people and resources to accomplish a goal and when the goal is accomplished the organization disappears When projects are complex unpredictable and changing their plans have to be flexible and able to adjust to situations that cannot be foreseen at the outset In this Very Short Introduction Andrew Davies looks at how projects have developed since the industrial revolution to create

the human built world in which we live work and play Considering some of our greatest endeavours such as the Erie Canal Apollo Moon landing Japanese product development and Chinese ecocity projects Davies identifies how projects are organized and managed to design and produce large and complex systems cope with fast changing conditions and deal with the immense uncertainties required to create breakthrough innovations in products and services He concludes by considering how projects could be organized to address the challenges facing the post industrial society of the 21st century ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Fewer, Better Things Glenn Adamson, 2018-08-07 From the former director of the Museum of Arts and Design in New York a timely and passionate case for the role of the well designed object in the digital age Curator and scholar Glenn Adamson opens *Fewer Better Things* by contrasting his beloved childhood teddy bear to the smartphones and digital tablets children have today He laments that many children and adults are losing touch with the material objects that have nurtured human development for thousands of years The objects are still here but we seem to care less and know less about them In his presentations to groups he often asks an audience member what he or she knows about the chair the person is sitting in Few people know much more than whether it is made of wood plastic or metal If we know little about how things are made it is hard to remain connected to the world around us *Fewer Better Things* explores the history of craft in its many forms explaining how raw materials tools design and technique come together to produce beauty and utility in handmade or manufactured items Whether describing the implements used in a traditional Japanese tea ceremony the use of woodworking tools or the use of new fabrication technologies Adamson writes expertly and lovingly about the aesthetics of objects and the care and attention that goes into producing them Reading this wise and elegant book is a truly transformative experience

Smith, 2023-05-04

This study illuminates the complex interplay between Deleuze and Guattari's philosophy and architecture Presenting their wide ranging impact on late 20th and 21st century architecture each chapter focuses on a core Deleuzian Guattarian philosophical concept and one key work of architecture which evokes contours or extends it Challenging the idea that a concept or theory defines and then produces the physical work and not vice versa Chris L Smith positions the relationship between Deleuze and Guattari's philosophy and the field of architecture as one that is mutually substantiating and constitutive In this framework modes of architectural production and experimentation become inextricable from the conceptual territories defined by these two key thinkers producing a rigorous discussion of theoretical practical and experimental engagements with their ideas Interior Design Masters Mark Hinchman, Elyssa Yoneda, 2018-06-27 Interior Design Masters contains 300 biographical entries of people who have significantly impacted design They are the people historical and contemporary that students and practitioners should know Coverage starts in the late Renaissance with a focus on the twentieth and twenty first centuries The book has five sections with the entries alphabetical in each so it can serve as a history textbook and a reference guide The seventeenth and eighteenth century section covers figures from Thomas Chippendale to Horace Walpole The nineteenth century section includes William Morris and Candace Wheeler The early twentieth century section presents modernism's design heroes including Marcel Breuer Eileen Gray and Gilbert Rohde The post World War II designers range from Madeleine Castaing to Raymond Loewy The final contemporary section includes Ron Arad and the Bouroullec brothers These are the canonical figures who belong to any design history The book also contains less well known figures who deserve attention such as Betty Joel the British art deco furniture designer Paul Veyseyre the Frenchman active in China in the 1930s and more recently Lanzavecchia Wai the Italian Singaporean duo whose work ranges from health care to helicopters Global in its coverage the book is richly illustrated with over 600 black and white and color photographs
