Thomson Gateway Router Manual:

Mobility Protocols and Handover Optimization Ashutosh Dutta, Henning Schulzrinne, 2014-03-07 This book provides a common framework for mobility management that considers the theoretical and practical aspects of systems optimization for mobile networks. In this book, the authors show how an optimized system of mobility management can improve the quality of service in existing forms of mobile communication. Furthermore, they provide a theoretical approach to mobility management as well as developing the model for systems optimization including practical case studies using network layer and mobility layer protocols in different deployment scenarios. The authors also address the different ways in which the specific mobility protocol can be developed taking into account numerous factors including security, configuration, authentication, quality of service, and movement patterns of the mobiles. Key Features: Defines and discusses a common set of optimization methodologies and their application to all mobility protocols for both IPv4 and IPv6 networks. Applies these technologies in the context of various layers: MAC layer, network layer, transport layer, and application layer, covering 802.11, LTE, WiMax, CDMA networks, and protocols such as SIP, MIP, HIP, VoIP, and many more. Provides a thorough analysis of the required steps during a mobility event such as discovery, network selection, configuration, authentication, security, association, encryption, binding, update, and media direction. Includes models and tables illustrating the analysis of mobility management as well as architecture of sample wireless and mobility test beds built by the authors involving inter-domain and intra-domain mobility scenarios. This book is an excellent resource for professionals and systems architects in charge of designing wireless networks for commercial 3G, 4G, LTE, IMS, military, and Ad Hoc environment. It will be a useful deployment guide for the architects, wireless service providers, graduate students, researchers in industry and academia, and systems engineers.
