Today who emerged from the Architectural Association at the start of the 1980s this book explores the group's work which echoed a wider artistic and literary culture that drew on the specific political social and physical condition of 1980s London. It traces NAT's identification with a particular stream of post punk postmodern expression a celebration of the abject an aesthetic of entropy and a do it yourself provisionality. NAT has most often been documented in reference to Nigel Coates the instigator of NAT which has led to a one sided one dimensional record of NAT's place in architectural history. This book sets out a more detailed contextual history of NAT told through photographs drawings and ephemera restoring a truer polyvocal narrative of the group's ethos and development.

Contacts Paul Ardenne, 2006 Fifteen projects 1988 2009. **Beauty in Architecture** Nele De Raedt, Maarten Delbeke, 2025-09-18 Beauty in Architecture brings together the views of architects artists critics historians and philosophers to explore how beauty can again become an integral part of discussions about architecture. Despite its recent resurgence in the public debate about the built environment the notion of beauty remains problematic and contested in critical discourse about architecture. When the topic is addressed it is either treated with suspicion historicized or contextualised or substituted with other often equally problematic terms such as order legibility atmosphere or character. This collection brings together voices from theory scholarship and practice to show that a conversation about beauty in architecture is necessary not only because the general public speaks easily and frequently about beauty in architecture but also because much can be gained from taking it seriously. Bringing together a diverse range of perspectives the essays reflect on the themes categories and concepts that should be part of such a conversation and show how talking about beauty engages important reflections on its ontology and what it involves values communities collectives and shared histories environment identity and political or legal mechanisms and institutions. A must read for designers and theorists alike this volume allows readers to discover new strategies and concepts to foster the discussion of beauty in architecture.

Brussels Housing Gérald Ledent, Alessandro

Porotto, Kristiaan Borret, 2025-02-17 Modern urban terraced houses or row houses emerged in Europe from the 17th century onwards. Usually two to three storeys high and with a garden at the back, they formed the traditional urban block. In Brussels, this bourgeois form of housing took on a particularly varied and inspiring form, including the well-known Art Nouveau residences, which form the DNA of the city to this day. This publication analyses 100 selected examples illustrating the emergence of the terraced house and its further development in other forms of housing. The result is a broad panorama and a history of the architecture and development of the city of Brussels with its particularly heterogeneous cityscape. This expanded edition comprises a new chapter by Kristiaan Borret, the city's former bouwmeester. 13 new case studies were added, and the content was updated. A project index facilitates quick navigation. With a photo essay by the well-known Belgian photographer Maxime Delvaux. All plans have been drawn in standard scales, especially for the publication. An atlas of exemplary historical and contemporary housing typologies. Substantially expanded edition of the successful typological manual. The way public spaces are designed reflects the period in which they were created. However, in our globalized world of experience and images, the desire for uniqueness tends to achieve the opposite: increasingly, designers of open spaces resort to the same devices and thereby distance themselves from the urban context. The author analyzes ten outstanding contemporary designs of public spaces in Europe in terms of their function in the urban context and what materials are used for their implementation. In interviews with the designers, she retraces the changes of the concepts during the design stage of the projects, underpinning her findings with numerous sketches. In addition, her research focuses on how the projects were received in the community. Learning from designers of outstanding public spaces in Europe. Numerous unpublished design sketches. A clear guide to urban design. Also available in a French edition. *The Tyranny of the Straight Line* Min-Kyung Lee, 2024-04-02 A revolutionary study of nineteenth-century Parisian cartography and its role in shaping a modern conception of space. Maps are rarely given the same attention as other print media or art forms in urban history. Author Min Kyung Lee shows their rich potential in this lavishly illustrated study, which brings together maps and other archival materials along with drawings and paintings. She works across disciplines to examine mapping practices in the development of nineteenth-century Paris and the transformative role that urban mapping had on the city's modernization. Lee investigates Paris's formation as a modern city, ultimately framing the practice of

cartography as a catalyst for the emergence of new spatial and compositional theories Beginning with an examination of the emblematic urban plan that Napol on III gave to the prefect of the Seine Georges Eug ne Haussmann in 1853 Lee explores the significance of the map itself the means of its production through surveying the methods of its use and reception by architects engineers and administrators and its place in the visual culture of Paris s modernization At the heart of this exploration is a focus on orthography in architecture and the new quality of exactitude in modern mapping practices The precise grid structure of orthographic maps and plans evinced a sense of objectivity yet it was not without political context and social consequences as Lee demonstrates throughout
