Making Global Value Chains Work for Development Daria Taglioni, Deborah Winkler, 2016-06-10 Economic technological and political

shifts as well as changing business strategies have driven firms to unbundle production processes and disperse them across countries. Thanks to these changes, developing countries can now increase their participation in global value chains (GVCs) and thus become more competitive in agriculture, manufacturing, and services. This is a paradigm shift from the 20th century when countries had to build the entire supply chain domestically to become competitive internationally. For policymakers, the focus is on boosting domestic value added and improving access to resources and technology while advancing development goals. However, participating in global value chains does not automatically improve living standards and social conditions in a country. This requires not only improving the quality and quantity of production factors and redressing market failures but also engineering equitable distributions of opportunities and outcomes, including employment, wages, work conditions, economic rights, gender equality, economic security, and protecting the environment. The internationalization of production processes helps with very few of these development challenges. Following this perspective, *Making Global Value Chains Work for Development* offers a strategic framework, analytical tools, and policy options to address this challenge. The book conceptualizes GVCs and makes it easier for policymakers and practitioners to discuss them and their implications for development. It shows why GVCs require fresh thinking; it serves as a repository of analytical tools and it proposes a strategic framework to guide policymakers in identifying the key objectives of GVC participation and in selecting suitable economic strategies to achieve them.

Frommer's? Japan Day by Day Matt Alt, Hiroko Yoda, Melinda Joe, 2012-03-27. Folded col map in pocket on p 3 of cover. *Two Billion Cars* Daniel Sperling, Deborah Gordon, 2009-01-13. At present, there are roughly a billion cars in the world. Yet within twenty years, the number will increase to 2 billion, a consequence of China and India's explosive growth. Given that greenhouse gases are already creating havoc with our climate, does this mean that matters will only get worse? Detroit, the federal government, and not least American consumers have all contributed to the current crisis. Through a concise history of America's love affair with cars and an overview of the global auto industry, Daniel Sperling, one of the nation's leading transportation experts, and Deborah Gordon explain how we arrived at this state and what we can do about it. Most provocatively, the authors contend that the two places that are the most troublesome with regard to emissions, California and China, are the most likely to become world leaders on these issues. Arnold Schwarzenegger's improbable embrace of eco-friendly fuel policies and China's forthright recognition that it needs to address its rampant pollution, with a far-reaching emissions policy, suggest that if they can tackle the issue effectively and honestly, then there really is reason for hope.
