Understanding and Overcoming the Challenge of Obesity and Overweight in the Armed Forces National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Food and Nutrition Board, Roundtable on Obesity Solutions, 2019-01-28 Obesity and overweight pose significant challenges to the armed forces in the United States affecting service members including active duty guard and reserve components veterans retirees and their families and communities The consequences of obesity and overweight in the armed forces influence various aspects of its operations that are critical to national security On May 7 2018 the National Academies of Sciences Engineering and Medicine held a workshop titled Understanding and Overcoming the Challenge of Obesity and Overweight in the Armed Forces Speakers examined how obesity and overweight are measured in the armed forces and how they affect recruitment retention resilience and readiness discussed service specific issues related to these problems and highlighted innovative strategies to address them through improved nutrition physical activity and stress management and offered perspectives from outside of the armed forces on approaches to prevent and treat obesity They also discussed the challenges and opportunities related to overcoming the concerns posed by obesity and overweight in the armed forces military families and their communities including potential cross sector opportunities This publication summarizes the presentations and discussions from the workshop

Military Strategies for Sustainment of Nutrition and Immune Function in the Field Institute of Medicine, Committee on Military Nutrition Research, 1999-06-13 Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients Severe malnutrition can cause significant alteration in immune response but even subclinical deficits may be associated with an impaired immune response and an increased risk of infection Infectious diseases have accounted for more off duty days during major wars than combat wounds or nonbattle injuries Combined stressors may reduce the normal ability of soldiers to resist pathogens increase their susceptibility to biological warfare agents and reduce the effectiveness of vaccines intended to protect them There is also a concern with the

inappropriate use of dietary supplements This book one of a series examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field It reviews the impact of compromised nutrition status on immune function the interaction of health exercise and stress both physical and psychological in immune function and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function The first part of the book contains the committee s workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops responses to the Army s questions conclusions and recommendations The rest of the book contains papers contributed by workshop speakers grouped under such broad topics as an introduction to what is known about immune function the assessment of immune function the effect of nutrition and the relation between the many and varied stresses encountered by military personnel and their effect on health
