The Wiley Encyclopedia of Packaging Technology Third Edition covers all aspects of packaging technologies essential to the food and pharmaceutical industries among others. This edition has been thoroughly updated and expanded to include important innovations and changes in materials, processes and technologies that have occurred over the past decade. It is an invaluable resource for packaging technologists, scientists and engineers, students and educators, packaging material suppliers, packaging converters, packaging machinery manufacturers, processors, retailers and regulatory agencies. In addition to updating and improving articles from the previous edition, new articles are also added to cover the recent advances and developments in packaging. Content new to this edition includes: Advanced packaging materials such as antimicrobial materials, biobased materials, nanocomposite materials, ceramic coated films and perforated films. Advanced packaging technologies such as active and intelligent packaging, radio frequency identification (RFID), controlled release packaging, smart blending, nanotechnology, biosensor technology and package integrity inspection. Various aspects important to packaging such as sustainable packaging, migration, lipid oxidation, light protection and intellectual property. Contributions from experts in all important aspects of packaging. Extensive cross referencing and easy to access information on all subjects. Large double column format for easy reference.

Fashion Supply Chain Management Virginia Grose, Nicola Mansfield, 2023-06-20. Fashion Supply Chain Management: Integrating Sustainability through the Fashion Supply Chain provides a comprehensive guide to the entire supply chain management process as it relates to the fashion industry. How fashion supply chains work from raw material to finished product and how generic supply chain concepts are applied in the fashion context. It focuses on contemporary strategic issues with which the sector is currently confronted, some of its current challenges and the innovative ways the sector has developed to respond to these challenges. Concepts such as sustainability, fast fashion, raw materials, logistics and reverse logistics, costing, lean and agile manufacturing and other supply chain strategies are expertly covered in this work, with each area underpinned by the new technologies required to support supply chains in the fashion industry. Each chapter is complemented by an in-depth case study from a relevant global organization so that readers can gain real world insight alongside pedagogy to aid student comprehension, including quizzes, end of chapter activities and role play scenarios. This key work is an essential textbook for students studying fashion supply chain operations and logistics as part of fashion management undergraduate and postgraduate degrees. Fully comprehensive on theory yet applied to practice, it will equip students with the tools and understanding for a future career in the fashion industry.

Automation in Textile Machinery

L. Ashok Kumar, M Senthil kumar, 2018-03-20 Automation is the use of various control systems for operating equipment such as machinery and processes. In line with this, this book deals with a comprehensive analysis of the trends and technologies in automation and control systems used in textile engineering. The control systems described in all chapters are to dissect the important components of an integrated control system in spinning, weaving, knitting, chemical processing, and garment industries and then to determine if and how the components are converging to provide manageable and reliable systems throughout the chain from fiber to the ultimate customer. Key Features: Describes the design features of machinery for operating various textile machineries in product manufacturing. Covers the fundamentals of the instrumentation and control engineering used in textile machineries. Illustrates sensors and basic elements for textile automation. Highlights the need of robotics in textile engineering. Reviews the overall idea and scope of research in designing textile machineries.
