Mineral Processing M.R. Pryor, 2012-12-06 textbook Basic description is attempted and the bibliography has been specifically chosen to guide the reader toward a fuller treatment of his special interests No fully satisfactory term has yet emerged to describe the processing of minerals which is also called ore dressing mineral dressing mineral engineering and in the University of London degree course mineral technology The dressing of ores was an excellent description of the older processes which aimed to break down rock to appropriate sizes grade it and separate the heavy fraction from the light one in each grade or size by gravity methods The work done in the mill today goes far beyond these simple operations and requires some knowledge of physical chemistry particularly the branches which deal with the physics and chemistry of surfaces and of the interphase between solid particle and the surrounding liquid At the same time the engineer must not become so absorbed in the study of fundamental and applied technology as a physico chemical science that he overlooks the mechanical economic and humanistic aspects of his work He is an engineer a chemist a physicist and an administrator and as such should have a sound scientific and cultural education Technically his work is to extract the valuable minerals from the ore sent to his mill economically it is to balance all the financial costs and returns in such a way as to ensure the maximum profit from the operation
