Water Development And Poverty Reduction Natural Resource Management And Policy:

Water Development and Poverty Reduction I.H. Olcay Ünver, Rajiv K. Gupta, Aysegül Kibaroglu, 2012-12-06 In the book's four Parts the interdisciplinary approach to many issues contributes to the relationship between water and poverty. Part I includes articles on the conceptual and methodological issues concerning poverty reduction through water resources development. It also offers analysis of quantitative measurements of poverty reduction including some approaches for creating a Water Poverty Index. Part II considers the institutional frameworks for management of water and poverty reduction. Topics range from community based decision making to international leadership. Part III encompasses discussions on participatory irrigation management and the privatization of urban water supplies and sewerage and the link to poverty. Case studies from India, Turkey and Jordan make up Part IV. The studies present diverse water management and development practices for poverty reduction including realistic pricing and effective irrigation practices, the use of water as an engine for sustainable development, small and large scale strategies for reducing the risks and uncertainties in water availability and food security, the economic value of improved water supplies and the positive impact of small scale development projects.

DAC Guidelines and Reference Series Natural Resources and Pro-Poor Growth The Economics and Politics

OECD, 2009-01-27 Natural capital constitutes a quarter of total wealth in low income countries. This publication demonstrates that natural resources can contribute to growth, employment, exports and fiscal revenues and highlights the importance of policies encouraging the sustainable management of these resources. Frontiers in Water Resource Economics

Renan-Ulrich Goetz, Dolores Berga, 2006-03-09 Most of the books published previously in the field of water resource economics focus on particular aspects of water economics such as institutions, pricing or water markets but none of them have given particular attention to methodological questions. However, the applied methodology within economic research has made some remarkable advances over the last 10-20 years. Some of these advances are of particular interest to the field of water economics. Therefore we think that a book that focusing on methodological advances within the field of water resource economics and showing how these advances can be applied in economic analysis of water issues makes a nice complement to the existing literature in this field. We identified five areas where we consider the methodological advances to be of particular importance: 1 asymmetric information and game theory, 2 uncertainty, 3 space, 4 water quality and 5 production and technology adoption. The selected papers for the book fall entirely within these categories. The book *Frontiers in Water Resource Economics* draws to a great extent on papers which were presented at the 7th Conference of the International Water and Resource Economics Consortium, June 3-5 2001 held in Girona, Catalonia, Spain. This conference was jointly organized with the 4th Conference of Environmental and Resource Economics by the Department of Economics, University of Girona.

Braving the Currents Tamra Pearson d'Estree, Bonnie B.G. Colby, 2006-05-02 *Braving the Currents* systematically identifies, applies and evaluates criteria to define success in complex multi-party natural resource disputes. The authors

elucidate the full range of criteria for defining success that researchers stakeholders and practitioners have relied on as they have participated in and reflected upon environmental conflict resolution CR efforts They examine 28 success criteria from many angles present a method for systematically considering all the elements necessary for successful environmental CR and then apply this analytic framework to eight specific western U S water conflicts The criteria are assessed in terms of their accessibility reliability validity and overall usefulness in evaluating specific conflict cases and different resolution methods The book concludes with observations about successfully resolved disputes a summary of what the authors have learned through their extensive evaluations and a discussion of how public policies can contribute to dispute prevention and management While the cases focus on water conflicts their processes and assessments are applicable to a wide body of cases At the suggestion of academic reviewers the authors have included Appendix A A Guidebook which enhances the book s text applicability by providing detailed instructions for case documentation and analysis This book will be of particular interest to students and instructors of conflict resolution environmental studies public policy negotiation and resource management public and private sector managers researchers practitioners and attorneys and conflict resolution professionals Water Governance: Retheorizing Politics Nicole J. Wilson, Joanne Nelson, Sameer H. Shah, Leila M. Harris, 2019-10-11 This republished Special Issue highlights recent and emergent concepts and approaches to water governance that re centers the political in relation to water related decision making use and management To do so at once is to focus on diverse ontologies meanings and values of water and related contestations regarding its use or its importance for livelihoods identity or place making Building on insights from science and technology studies feminist and postcolonial approaches we engage broadly with the ways that water related decision making is often depoliticized and evacuated of political content or meaning and to what effect Key themes that emerged from the contributions include the politics of water infrastructure and insecurity participatory politics and multi scalar governance dynamics politics related to emergent technologies of water bottled or packaged water and water desalination and Indigenous water governance *Rural Livelihoods and Poverty Reduction Policies* Frank Ellis, H. Ade Freeman, 2004-08-02 This important new collection of contributions brings together current thinking on poverty reduction and rural livelihoods in developing countries As well as leading economists in the field such as Frank Ellis and Chris Barrett there are a number of contributors from developing countries themselves The book examines both macroeconomic and microeconomic phenomena and contains wide range of case studies Skilfully exposing the gap that exists between the rhetoric of poverty reduction strategies in capital cities and the practice of public sector delivery in rural areas this key text will be essential reading for advanced students and researchers in the fields of rural development rural livelihoods poverty reduction strategies and Sub Saharan Africa development as well as advisors and practitioners in international organizations **Rural Development** Alex F. International Food Policy Research Institute (IFPRI), *Improving Water Policy and Governance* Cecilia Tortajada, Asit Biswas, 2013-09-13 Old forms of governance in both public and private sectors are becoming increasingly irrelevant because of rapidly changing conditions. Because of these changes both governance processes and the scope of the institutions through which power is exercised throughout society may have to undergo a radical break with the past and prevailing models of governance. Water sector is an integral part of the global system. Consequently its governance processes and the institutions responsible for its management must change as well in order to cope with the current challenges and potential future changes. Because of these current and future changes water governance may have to change more during the next 20 years compared to the past 2000 years if societal expectations are to be successfully met. All these changes will make water governance more complex than ever before witnessed in human history. Improving water governance will require good and objective analyses of case studies from different parts of the world as to what has worked why and the enabling environments under which good governance has been possible. The present volume analyses case studies of good water governance from different parts of the world and for different water use sectors. It concludes with an analysis of the critical issues that should be considered for water governance and a priority research agenda for improving water governance in the future. This book was published as a special issue of the International Journal of Water Resources Development. **Water** Unesco, World Water Assessment Programme (United Nations), 2006. This illustrated report sets out a global review of the state of the world's freshwater resources based on the collective work of 24 United Nations agencies following on from the conclusions of the first UN World Water Development Report *Water for People Water for Life* published in 2003. ISBN 9231038818. This second edition discusses progress towards the water related targets of the UN Millennium Development Goals and examines a range of key issues including population growth and increasing urbanisation, changing ecosystems, food production, health, industry and energy as well as risk management, valuing and paying for water and increasing knowledge and capacity. It contains 16 case studies which consider key challenges in water resource management and makes a number of recommendations to guide future action and encourage sustainable use, productivity and management of our increasingly scarce freshwater resources. *Managing Water Under Uncertainty and Risk: United Nations World Water Development Report #4 (3 Vols.)* UNESCO, 2012-01-01. Released every three years since March 2003, the United Nations World Water Development Report (WWDR) a flagship UN Water report published by UNESCO has become the voice of the United Nations system in terms of the state use and management of the world's freshwater resources. The report is primarily targeted at national decision makers and water resource managers but is also aimed at educating and informing a broader audience from governments to the private sector and civil society. It underlines the important roles water plays in all social, economic and environmental

decisions highlighting policy implications across various sectors from local and municipal to regional and international levels Similarly to the first two editions this report includes a comprehensive and up to date assessment of several key challenge areas such as water for food energy and human health and governance challenges such as institutional reform knowledge and capacity building and financing each produced by individual UN agencies

The New Generation of Watershed Management Programmes and Projects ,2006-01-01 On the occasion of the International Year of Mountains 2002 FAO and its partners undertook a large scale assessment and global review of the current status and future trends of integrated and participatory watershed management The overall objectives were to promote the exchange and dissemination of experiences in implementing watershed management projects in the decade from 1990 to 2000 and to identify the vision for a new generation of watershed management programmes and projects This resource book represents a summary and critical analysis of the rich discussions and vast materials that emerged during the review as well as the review s findings and recommendations It presents the state of the art in watershed management promotes further reflection and creative thinking and proposes new ideas and approaches for future watershed management programmes and projects This publication has been written primarily for field level watershed management practitioners and local decision makers involved in watershed management at the district or municipality level It will also be a useful source of information for other readers such as senior officers and consultants specialized in other areas evaluators policy makers and students of watershed management

Rural, Environment, and Social Development Strategies for the Europe and Central Asia Region ,2000-01-01 This report proposes a World Bank strategy for assisting the rural environmental and social development of Eastern Europe and Central Asia It has been produced for a general audience partly for consultation purposes and is therefore a work in progress Each of the three areas of development is examined in separate chapters and each summarises the World Bank assistance strategy in that area The conclusion is that the challenge posed by the objectives of this report are far beyond the World Bank s abilities to achieve on its own

Green Web-II Medani P. Bhandari,2022-09-01 This second edition of the book Green Web II Standards and Perspectives from the IUCN Program Policy Development in Environment Conservation Domain with reference to India Pakistan Nepal and Bangladesh investigates the IUCN s role in global biodiversity conservation policy as well as in national program development in India Pakistan Nepal and Bangladesh It explores how nature protection priorities and approaches are promoted or addressed by IUCN and how environment conservation policies are created and maintained in states of South Asia with different capacities It also evaluates IUCN s competency in biodiversity climate change nature conservation and environmental policy formulation at the global regional and country levels This book adds to our knowledge firstly by contributing to a small but growing body of work on the sociology of international organizations International Governmental Organizations IGOs have previously been mainly the subject of political science Secondly it critically explores one of the largest and most active nature conservation organizations in the world Thirdly it also explores

how IUCN actually goes about building protectoral programs with individual member nations Finally the research also shows the historical development of global institutions and IUCN s activities with member nations in helping to define or redefine the concept of global governance The outcomes of this research will also be beneficial for global collaboration networking and for the identification of common concerns among the many environmental and conservational organizations at the international and national level In this broader sense the research outcomes might be beneficial to constituencies of the global North as well as global South because of the nature and coverage of IUCN and its role in conservation policy formation This effort may serve as a model for additional research on international organizations Technical topics discussed in the book include The Motivation for Environmental Conservation How personal efforts make a difference The Role of International Environment Conservation Organizations The Political Economy of Organizations Network theory Institutional theory Stakeholder theory Governance theory Governance performance and Competitiveness Popularity indices Knowledge creation and diffusion Conservation commons
